**The Dawn of Fluid Dynamics** Michael Eckert, 2007-06-27 This is the first publication to describe the evolution of fluid dynamics as a major field in modern science and engineering It contains a description of the interaction between applied research and application taking as its example the history of fluid mechanics in the 20th century The focus lies on the work of Ludwig Prandtl founder of the aerodynamic research center AVA in Göttingen whose ideas and publications have influenced modern aerodynamics and fluid mechanics in many fields While suitable for others this book is intended for natural scientists and engineers as well as historians of science and technology

The Enigma of the Aerofoil David Bloor, 2011-10-03 Why do aircraft fly How do their wings support them In the early years of aviation there was an intense dispute between British and German experts over the question of why and how an aircraft wing provides lift The British under the leadership of the great Cambridge mathematical physicist Lord Rayleigh produced highly elaborate investigations of the nature of discontinuous flow while the Germans following Ludwig Prandtl in Göttingen relied on the tradition called technical mechanics to explain the flow of air around a wing Much of the basis of modern aerodynamics emerged from this remarkable episode yet it has never been subject to a detailed historical and sociological analysis In The Enigma of the Aerofoil David Bloor probes a neglected aspect of this important period in the history of aviation Bloor draws upon papers by the participants their restricted technical reports meeting minutes and personal correspondence much of which has never before been published and reveals the impact that the divergent mathematical traditions of Cambridge and Göttingen had on this great debate Bloor also addresses why the British even after discovering the failings of their own theory remained resistant to the German circulation theory for more than a decade The result is essential reading for anyone studying the history philosophy or sociology of science or technology and for all those intrigued by flight
