## Principles of FLIGHT

A force is a push or a pull. Four main forces affect the flight behavior of objects and aircraft: **lift**, **thrust**, and **drag**. These four forces were first identified by English inventor and scientist Sir George Cayley.

**LIFT**

Lift is a force that acts against weight caused by air moving over and under the wings.

**THRUST**

Thrust is the force that moves an object forward, which can be provided by muscles, engines, or gravity.

**DRAG**

Drag is the force that acts against thrust caused by the resistance of air.

**WEIGHT**

Weight is the force that pulls everything toward the earth due to gravity.

Lift and weight are opposite forces, and so are thrust and drag.

What do you think happens when one of these forces is greater than the other (i.e., when lift is greater than weight)?

## ORY of FLIGHT

Man flying for millions of years, birds have some secrets, which can be used to fly. This knowledge that is not necessary now.
