Flood Problem and Management in South Asia M. Monirul Qader Mirza,Ajaya Dixit,Ainun Nishat,2013-03-09 Flood Problem and Management in South Asia focuses on both the hazard and the vulnerability aspects of floods This book addresses floods in South Asia from a multidisciplinary approach The characteristics and nature of the flood problem and its management aspects are examined It is suggested that flood control and management focused on structural solutions using embankments and reservoirs are insufficient Effective solutions must go beyond structural measures and require major restructuring of both legal systems and institutions responsible for management For those people living in the vast flood plains of South Asia to be able to overcome social economic and environmental vulnerabilities an adaptive approach to management of flood risks that identifies specific strategies is needed **Mitigation, Management and Control of Floods in South Asia Volume One** , Global Environmental Changes in South Asia A.P. Mitra,C. Sharma,2012-03-05 The Fourth Assessment Report of IPCC having clinched in 2007 the evidence of global warming on account of anthropogenic activities backed with scientific data gathered and analyzed globally has made it mandatory world over to focus efforts on delineation of the anticipated adverse impacts of global warming on regional temperature and moisture regimes and the linked hydrologic climatic and biospheric processes First and foremost is the requirement to understand vulnerability to food and livelihood security in various ecosystems on mainland mid range and high mountains as well as coastal areas including CEZs The projected global temperature rise of the order of about two degrees or more and further rise at a decadal rate of around 0.2 C is sufficient to make grievous changes in sea surface level and submerge many low lying coastal areas around the world thereby possibly causing unprecedented losses to human habitat and livelihood in the coming years A rise in climate variability is also becoming increasingly evident with potential direct impact on agricultural performance on water accessibility and on weather extremes Developing countries due to their poor infrastructure limited resources and large impoverished population are likely to face more intense and widespread adverse impact of climate change than the developed world and also have limited adaptation capacity Handbook of Flood Risk Management in Developing Countries Victor Oladokun,David Proverbs,Oluseye Adebimpe,Taiwo Adedeji,2023-03-31 This new handbook brings together various views and experiences of the impacts of flooding and its management in Africa Asia and Latin America by drawing from traditional and modern approaches adopted by communities homeowners academics project managers institutions and policy makers Key stakeholders provide insights and perspectives on flood hazards flood impacts flood control and adaptation strategies across these regions The inclusion of policy makers emergency responders leaders of key organizations and managers of flood defence projects makes this volume a unique addition to the flood management literature The chapters are organized to reveal various impacts and challenges associated with the management of flooding including response and recovery The chapter contributions bring together the different impacts of flooding and propose various mitigation approaches They

describe procedures for managing flooding and reducing the impacts from the perspectives of policy makers environmental planners and restorers of flood affected communities Also the book considers some of the related aspects including land use waste management drainage systems security challenges urban planning and development and their contributions to flooding The book s primary target is experienced researchers and practitioners in flood risk management It would also serve as a key text for postgraduate students studying related programmes Inhabitants of flood prone communities in such developing countries will also find the text an important resource for guidance and understanding This multi disciplinary book represents a valuable contribution for a wide range of professionals e g in engineering built environment health retail etc who are interested in flood control and management and or faced with flood related challenges in the course of their work
