Originally published in 1981 *Historical Plant Geography* is an introductory treatment of historical plant geography and stresses the basic theoretical frame of the subject The book is about neither the study of vegetation nor the concept of the ecosystem instead focusing on the much older tradition concerned with analysing the geographical distribution of individual species and natural plant groups Important areas are discussed such as global plate tectonics and sea floor spreading plant maps are introduced and there is a basic treatment of recent advances in plant taxonomy The book will appeal to students and academics of geography botany ecology and environmental sciences      **A Computer-Mapped Flora** D.A.

**Sensing Applications in Biogeography and Ecology** Andrew C. Millington, Stephen J. Walsh, Patrick E.

Osborne, 2013-03-11 In recent years the conservation of tropical forests has received worldwide publicity whereas effective forest management particularly for timber extraction has attracted little attention and gained some notoriety The overall aim of the present paper was to examine how environmental micro variation in the Chiquibul Forest Reserve of Belize can influence species distribution and thereby inform management strategy The paper deals first with the background to forest management in Belize then considers the methodology used in the present study and finally assesses the preliminary results The specific objectives are 1 to assess the effects of changing scale on the variability of selected individual soil properties in forest plots within the same vegetation class and 2 to examine the variation in soil properties and tree species distribution

and to integrate environmental and ecological data over a range of scales BACKGROUND Whereas the global and regional distribution of tropical forests is broadly governed by climatic and altitudinal variation individual forest tracts need to consider a range of other locally important factors to explain species distribution and change With very high species diversity tropical forests present a major challenge in the attempt to unravel controlling factors in distribution and growth Swaine et al 1987 Research that attempts to explain diversity has looked at species distribution according to a range of factors with a general recognition that soil fertility plays a significant if ill defined role Swaine 1996
