Drake, 2012-12-06 The diversity of the earth's climates superimposed upon a complex configuration of physical features has provided the conditions for the evolution of a remarkable array of living things which are linked together into complex ecosystems The kinds of organisms comprising the ecosystems of the world and the nature of their interactions have constantly changed through time due to coevolutionary interactions along with the effects of a continually changing physical environment In recent evolutionary time there has been a dramatic and ever accelerating rate of change in the configuration of these ecosystems because of the increasing influence of human beings These changes range from subtle modifications caused by anthropogenically induced alterations in atmospheric properties to the total destruction of ecosystems Many of these modifications have provided the fuel food and fiber which have allowed the expansion of human populations Unfortunately there have been many unanticipated changes which accompanied these modifications which have had effects detrimental to human welfare including substantial changes in water and air quality For example the use of high sulfur coal to produce energy in parts of North America is altering the properties of freshwater lakes and forests because of acidification

Sharsmith, 1924 **Mountains and Marshes** David Rains Wallace, 2015-12-01 Described as a writer in the tradition of Henry David Thoreau John Muir and other self-educated seers by the San Francisco Chronicle David Rains Wallace turns his attention to one of the most distinctive corners of California the San Francisco Bay Area Weaving a complex and engaging story of the Bay Area from personal historical and environmental threads Wallace's exploration of the natural world takes readers on a fascinating tour through the region from Point Reyes National Park where an abandoned campfire and an invasion of Douglas fir trees combust into a dangerous wildfire to Oakland's Lake Merritt a surprising site amid skyscrapers for some of the best local bird watching from the majestic Diablo Range near San Jose where conservationists fight against land developers to preserve species like mountain lions and golden eagles to the Golden Gate itself the iconic bridge that geologically speaking leads not to gold but to serpentine Each essay explores a different place throughout the four corners of the Bay Area uncovering the flora and fauna that make each so extraordinary With a naturalist's eye a penchant for local history and an obvious passion for the subject Wallace's new collection is among the first nature writing dedicated entirely to the Bay Area Informative engrossing and exquisitely described Mountains and Marshes
