Radiation Protection for Particle Accelerator Facilities National Council on Radiation Protection and Measurements, 2003 The purpose of this Report is to provide design guidelines for radiation protection and to identify those aspects of radiological safety that are of major or even unique importance to the operation of particle accelerator installations and to suggest methods by which safe operation may be achieved The report is written from an engineering physics viewpoint and is intended to be useful to those engaged in the design and operation of accelerators particularly in smaller institutions and organizations that do not have a large radiological protection staff *Technical Evaluation of the*

NASA Model for Cancer Risk to Astronauts Due to Space Radiation National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee for Evaluation of Space Radiation Cancer Risk Model, 2012-04-19 NASA's current missions to the International Space Station ISS and potential future exploration missions involving extended stays by astronauts on the lunar surface as well as the possibility of near Earth object NEO or Mars missions present challenges in protecting astronauts from radiation risks. These risks arise from a number of sources including solar particle events SPEs galactic cosmic rays GCRs secondary radiation from surface impacts and even the nuclear isotope power sources transported with the astronauts. The serious early and late radiation health effects potentially posed by these exposures are equally varied ranging from early signs of radiation sickness to cancer induction. Other possible effects include central nervous system damage cataracts cardiovascular damage heritable effects impaired wound healing and infertility. Recent research much of which has been sponsored by NASA has focused on understanding and quantifying the radiation health risks posed by space radiation environments. Although many aspects of the space radiation environments are now relatively well characterized important uncertainties still exist regarding biological effects and thus regarding the level and types of risks faced by astronauts. This report presents an evaluation of NASA's proposed space radiation cancer risk assessment model which is described in the 2011 NASA report *Space Radiation Cancer Risk Projections and Uncertainties 2010*. The evaluation in *Technical Evaluation of the NASA Model for Cancer Risk to Astronauts Due to Space Radiation* considers the model components input data for the radiation types estimated doses and epidemiology and the associated uncertainties. This report also identifies gaps in NASA's current research strategy for reducing the uncertainties in cancer induction risks.

The purpose of structural shielding is to limit radiation exposure to employees and members of the public. The information supersedes the recommendations that address such facilities in NCRP Report No 49 *Structural Shielding Design and Evaluation for Medical Use of X Rays and Gamma Rays of Energies Up to 10 MeV* which was issued in September 1976. NCRP Report No 147 includes a discussion of the various factors to be considered in the selection of appropriate shielding materials and in the calculation of barrier thicknesses. The Report presents the fundamentals of radiation shielding discusses shielding design goals for controlled and uncontrolled areas in or near x ray imaging facilities and defines the relationship of these goals to the NCRP effective dose limits for radiation workers and members of the public.

The Report includes a detailed discussion of the recommended shielding design methodology for x ray imaging facilities and provides an extensive collection of shielding data and sample shielding calculations for various types of x ray imaging facilities The Report is mainly intended for those individuals who specialize in radiation protection However it will also be of interest to architects hospital administrators and related professionals concerned with the planning of new facilities that use x rays for medical imaging *Space Life Sciences and Planetary Protection* Gerda Horneck,2008 Fluence-based and Microdosimetric Event-based Methods for Radiation Protection in Space Michael Joyce,National Council on Radiation Protection and Measurements,2014-05-14 *Radiation Protection in Veterinary Medicine* National Council on Radiation Protection and Measurements,2004 **Index Medicus** ,2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Responding to a Radiological Or Nuclear Terrorism Incident** National Council on Radiation Protection and Measurements,2010 Recommendations of the National Council on Radiation Protection and Measurements
