Flood And Megaflood Processes And Deposits Recent And Ancient Examples:

Flood and Megaflood Processes and Deposits I. Peter Martini, Victor R. Baker, Guillermina Garzón, 2009-03-05 The aim of this publication is the understanding of large floods and their impact on the Earth's surface. The major objectives are 1 to take a second look at what constitutes a megaflood that the principle of uniformitarianism is at some loss to explain and 2 to try to determine what could happen in such large floods by analyzing those that occur in front of glaciers in alluvial fans and in alluvial valleys. The products of these floods are presented in terms of sedimentary deposits, erosional features and damage to human activities. The volume bears out the concept that sedimentological analysis can be a powerful tool not only for reconstructing processes that have acted on ancient landscapes but also as a technique for risk assessment of certain troubled areas. Therefore this volume is of interest not only to sedimentologists, geomorphologists but also to engineers, land-use planners and anyone interested in the interrelation between humans and the environment. If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP32>

Megaflooding on Earth and Mars Devon M. Burr, Paul A. Carling, Victor R. Baker, 2009-09-24 Megaflooding is the sudden discharge of exceptional volumes of water. Megafloods have significantly altered the terrain of Earth and Mars and may have acted as triggers for climate change on these planets. Recently research into megaflooding has made important advances on Earth: real-time measurements of contemporary floods in Iceland complement research into older and larger terrestrial floods while on Mars terabytes of data from several spacecraft orbiting that planet are dramatically revising our view of flooding there. Beginning with a historical overview of flood science, the book presents sections on morphology and mechanisms, flood sedimentology and modelling, each illustrated with examples from Earth and Mars. By juxtaposing terrestrial and Martian research, this volume creates a unique synthesis to further our understanding of these enormous paleoflood events. It is an invaluable reference for researchers and students of hydrology, geomorphology, sedimentology and

planetary science as well as environmental and hydraulic engineers *The New Answers Book Volume 2* Ken Ham, 2008-05-01 What happens when you have more hot questions on the Bible and creationism than you can answer in one book You create a second volume The New Answers Book 2 explores over 30 exciting and faith affirming topics including The fall of Lucifer and the origin of evil When does life begin and why does it matter Is evolution a religion and why should I care Archaeology Egyptian Chronology and the great flood Could early biblical figures like Noah really live to over 900 years of age What was the Star of Bethlehem and how did the wise men follow it The Evolutionization of our culture including intelligent design gay marriage Hollywood movies and more Explore these and other topics answered biblically and logically in this book from the world's largest apologetics ministry Answers in Genesis Contributors include Ken Ham Dr Andrew Snelling Dr Jason Lisle Dr Elizabeth Mitchell Dr Danny Faulkner Mike Riddle and more *Treatise on Geomorphology*, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in

the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned **Dating Torrential Processes on Fans and Cones** Michelle

Schneuwly-Bollschweiler,Markus Stoffel,Florian Rudolf-Miklau,2012-07-15 This book provides a detailed overview on methods used for the dating of past torrential activity on fans and cones and fosters the discussion on the impact of past and potential future climate change on torrential processes The book has a clear focus on the practical applications of these methods complemented by case studies The limits of each dating method in case of excessive natural and human interventions on fans and cones are shown *Fire-Breathing Dinosaurs? The Hilarious History of Creationist Pseudoscience at Its Silliest* Philip J. Senter,2019-03-14 A dinosaur book like no other this irreverent chronicle of science and pseudoscience takes the reader on a journey through numerous bizarre ideas about ancient reptiles Were dragon legends inspired by human encounters with fire breathing dinosaurs Do the Bible and other ancient works of literature and art depict dinosaurs Astoundingly those and other strange notions have infiltrated grade school science textbooks This expos unmasks the errors that underlie such notions and reveals the science that flattens them while treating readers to explanations of rocket fuel nuclear power plants the electric eel s shocking capabilities and how the young Earth creationist position contradicts the very scripture that it strives to uphold Finding humor in absurdity the book shows fans of science religious studies folklore and fire that young Earth creationist dinosaur pseudoscience is deeply comic once one gets to know it properly

Contributions to Modern and Ancient Tidal Sedimentology Bernadette Tessier, Jean-Yves Reynaud, 2016-03-03 Tidal deposits have been a specific research topic for about 40 years and whilst this has resulted in a proliferation of papers in scientific journals there have only been a few book length syntheses Over the years tidal sedimentology has been reinforced by fluid mechanics and numerical modelling but has remained rooted in facies and stratigraphic studies Recent developments in tidal sedimentology lean toward a more quantitative assessment of the imprint of tides in the facies record of intertidal and shallow subtidal areas They highlight the increasing relevance of tidal deposits studies from high resolution subsurface reservoir geology to climate change and sea level rise This volume gathers 17 contributions to the Tidalites 2012 congress held in Caen France It reflects current advances in the sedimentology and stratigraphy of tidal deposits in both ancient and modern environments It shows the current diversity of this field of research through a wide spectrum of methods including remote sensing in situ hydrodynamical measurements and ichnology in addition to classic field studies and petrography
