

# HOW TO PREVENT FLOODS?

The 2019 Indian floods were a series of floods that affected over thirteen states in late July and early August 2019, due to incessant rains. At least 200 people died and about a million people were displaced. Karnataka and Maharashtra were the most severely affected states. It was the heaviest monsoon in last 25 years. More than 1600 people died between June and October 2019.

➤ Prevent the dumping of waste in drains, because when it rains the waterways are blocked by massive chunks of litter. This causes water to find its way into the streets and houses.

➤ Construction of Detention basin, small reservoirs connected to waterways, act as temporary storage for water during floods. Thus giving people enough time to escape.

➤ Retaining wall levels, lakes, dams, reservoirs or retention ponds can be constructed to hold extra water during times of flooding.

➤ Trees, shrubs and grass help protect the land from erosion by moving water. People in low-lying areas must be encouraged to use a lot of vegetation to help break the power of moving flood water and also help reduce erosion.
