Floral Biology Of Temperature Zone Fruit Trees And Small Fruits:

Floral Biology of Temperate Zone Fruit Trees and Small Fruits József Nyéki, Miklós Soltész, 1996-01 This book is a comprehensive synthesis of information on floral biology and pollination of fruit trees. Complete overview is presented on temperate zone fruit trees and small fruits. Main chapters are concerned both with the biological and ecological backgrounds of floral biology and pollination. All related items are discussed ranging from flower development and pollination requirements to orchard planning and bee pollination. World literature is carefully surveyed with a special emphasis on East European studies having dealt intensively with the issues of floral biology and bee pollination in the past two decades. All of the authors are internationally renowned specialists in the fields of floral biology and pollination. Floral Biology, Pollination and Fertilisation in Temperate Zone Fruit Species and Grape Pál Kozma, 2003 This book fills a gap in the scientific literature of horticulture. A detailed survey on floral biology related to the temperate zone fruit species and grape by prominent representative of the profession. **Pollination Biology, Vol.1** Dharam P. Abrol, 2015-11-16 The book covers interplay between pest management strategies and safety of pollinators. Detailed information is provided on pests and pollinators of temperate subtropical and tropical fruit crops. Most of the fruit crops are highly cross pollinated and depend upon insects or benefit from insect pollination for fruit set. Insect pests on the other hand cause major economic damage on fruit crops in tropics, subtropics and temperate. Evidently pest management in fruit crops on one hand and providing safety to the pollinators on the other is a challenging task in the context of increasing horticultural productivity without upsetting the ecological balance. This book aims to integrate and develop pest control strategies in a way to minimize their impact on beneficial insect species such as natural enemies and pollinators to enhance fruit production and quality. The book covers interplay between pest management strategies and safety of pollinators. Detailed information is provided on pests and pollinators of temperate subtropical and tropical fruit crops. Pollinators play a crucial role in flowering plant reproduction and in the production of most fruits and vegetables. Most of the fruit crops are highly cross pollinated and depend upon insects or benefit from insect pollination for fruit set. Insect pests on the other hand cause major economic damage on fruit crops in tropics, subtropics and temperate. strategies in a way to minimize their impact on beneficial insect species such as natural enemies and pollinators to enhance fruit production and quality The book covers interplay between pest management strategies and safety of pollinators Bee Pollination in Agricultural Ecosystems Rosalind James,Theresa L. Pitts-Singer,2008-09-09 This book discusses the interplay among bees agriculture and the environment Both managed and wild bees are critical for successful pollination of numerous fruit vegetable oilseed and legume seed crops and are considered here So is treatment of how bees also impact the agro ecosystem in ways beyond simple pollination such as by transporting pollen from genetically modified plants and by enhancing biological control strategies The principles and examples are international The concept is in line with current thinking of pollination as an important ecological process and an understanding of agriculture as disturbance ecology
