Fluid Catalytic Cracking V - Materials and Technological Innovations, 2001 **Fluid Catalytic Cracking V - Materials and Technological Innovations**, 2001 **Fluid Catalytic Cracking V** M.L. Occelli, P. O'Connor, 2001-04-27 Catalyst production for the transformation of crudes into gasoline and other fuel products is a billion dollar year business and fluid cracking catalysts FCCs represent almost half of the refinery catalyst market During the cracking reactions the FCC surface is contaminated by metals Ni V Fe Cu Na and by coke deposition As a result the catalyst activity and product selectivity is reduced to unacceptable levels thus forcing refiners to replace part of the recirculating equilibrium FCC inventory with fresh FCC to compensate for losses in catalyst performance About 1 100 tons day of FCC are used worldwide in over 200 fluid cracking catalyst units FCCUs It is for these reasons that refiners interest in FCC research has remained high through the years almost independantly of crude oil prices However recent oil company mergers and the dissolution of research laboratories have drastically decreased the number of researchers involved in petroleum refining research projects as a result the emphasis of research has shifted from new materials to process improvements and this trend is clearly reflected in the type of papers contained in this volume Modern spectroscopic techniques continue to be essential in the understanding of catalyst performance and several chapters in the book describe the use of ^{27}Al ^{29}Si and ^{13}C NMR to study variation in FCC acidity during aging and coke deposition In addition several chapters have been dedicated to the modeling of FCC deactivation and to the understanding of contact times on FCC performance Refiners efforts to conform with environmental regulations are reflected in chapters dealing with sulfur removal metals contaminants and olefin generation *Fluid Catalytic Cracking VI: Preparation and Characterization of Catalysts* Mario L. Occelli, 2004-07-06 This volume looks at the recent progress of this technology as reported in the 21 papers presented during the 219th National Meeting of the ACS in New York September 5 11 2003 In addition the volume focuses on the use of modern spectroscopic techniques for the generation of detailed structural analysis required for the advancement of the science of FCC design Other chapters look at the use and importance of solid state nuclear magnetic resonance NMR microcalorimetry and atomic force microscopy AFM to the study of FCCs and discussing strategies to control pollutant emissions from a refinery FCCU and looking at advances in FCC preparation **Impact of Zeolites and other Porous Materials on the New Technologies at the Beginning of the New Millennium** R. Aiello, F. Testa, G. Giordano, 2002-08-16 Crystalline solids with highly structured micro scale pores are called zeolites Their well defined structure and large contact surface make them extremely useful as catalysts Their most common use is in washing powders Different features are caused by the shape and size of the pores and the presence of different metals in the crystal structure Research is conducted both towards better understanding of the relations between form and function and towards identifying new possible uses This title presents a collection of contributions from internationally renowned researchers in the field of the Science and Technology of micro and mesoporous materials The aim

of the conference is to create an international forum where researchers from academia as well as from industry can discuss ideas and evaluate the impact of zeolites and other porous materials on new technologies at the beginning of the new millennium Gives the most recent developments in the origin synthesis and characterisation of zeolitic materials Outlines the impact and application of zeolites in various industrial processes An adjourned state of art in the field of zeolites and other porous materials **Zeolites and Ordered Mesoporous Materials: Progress and Prospects** Jiri Cejka,2005-08-09
