Flight To Extinction:

A Feathered River Across the Sky Joel Greenberg, 2014-01-30 The epic story of why passenger pigeons became extinct and what that says about our current relationship with the natural world When Europeans arrived in North America 25 to 40 percent of the continent's birds were passenger pigeons traveling in flocks so massive as to block out the sun for hours or even days The downbeats of their wings would chill the air beneath and create a thundering roar that would drown out all other sound John James Audubon impressed by their speed and agility said a lone passenger pigeon streaking through the forest passes like a thought How prophetic for although a billion pigeons crossed the skies 80 miles from Toronto in May of 1860 little more than fifty years later passenger pigeons were extinct The last of the species Martha died in captivity at the Cincinnati Zoo on September 1 1914 As naturalist Joel Greenberg relates in gripping detail the pigeons propensity to nest roost and fly together in vast numbers made them vulnerable to unremitting market and recreational hunting The spread of railroads and telegraph lines created national demand that allowed the birds to be pursued relentlessly Passenger pigeons inspired awe in the likes of Audubon Henry David Thoreau James Fenimore Cooper and others but no serious effort was made to protect the species until it was too late Greenberg's beautifully written story of the passenger pigeon paints a vivid picture of the passenger pigeon's place in literature art and the hearts and minds of those who witnessed this epic bird while providing a cautionary tale of what happens when species and natural resources are not harvested sustainably **Flight**

Ways Thom van Dooren, 2014-06-03 A leading figure in the emerging field of extinction studies Thom van Dooren puts philosophy into conversation with the natural sciences and his ethnographic encounters to vivify the cultural and ethical significance of modern day extinctions Unlike other meditations on the subject Flight Ways incorporates the particularities of real animals and their worlds drawing philosophers natural scientists and general readers into the experience of living among and losing biodiversity Each chapter of Flight Ways focuses on a different species or group of birds North Pacific albatrosses Indian vultures an endangered colony of penguins in Australia Hawaiian crows and the iconic whooping cranes of North America Written in eloquent and moving prose the book takes stock of what is lost when a life form disappears from the world the wide ranging ramifications that ripple out to implicate a number of human and more than human others Van Dooren intimately explores what life is like for those who must live on the edge of extinction balanced between life and oblivion taking care of their young and grieving their dead He bolsters his studies with real life accounts from scientists and local communities at the forefront of these developments No longer abstract entities with Latin names these species become fully realized characters enmeshed in complex and precarious ways of life sparking our sense of curiosity concern and accountability toward others in a rapidly changing world **Monitoring Butterflies for Ecology and Conservation** E.

Pollard, T.J. Yates, 1993 Previously published in hardback and now made available in paperback this ground breaking book is a must for all interested in butterflies whether as conservation biologist amateur or professional entomologist or as a student

studying the phenomenon of butterfly populations as part of a number of biology ecology or conservation courses Recently many British butterflies have suffered severe declines while others have flourished and expanded in range This is the first book to describe the results from a British scheme to monitor butterflies during this period of change The Monitoring Scheme initiated in 1976 by the senior author is based on frequent counts at some 90 sites throughout Britain The combined efforts of both amateurs and professionals have thus produced a dataset with no equivalent elsewhere in the world The book therefore provides a unique perspective on trends in numbers extinction and foundation of populations flight periods local distributions migration and other aspects of population ecology Practical problems encountered during the conservation of butterflies of individual sites are outlined The relevance of this monitoring for an understanding of the effects of the weather climatic warming is described

Species Diversity and Community Structure Teiji Sota,Hideki Kagata,Yoshino Ando,Shunsuke Utsumi,Takashi Osono,2013-08-30 This book introduces recent progress in the study of species diversity and community structures in terrestrial organisms conducted by three groups at Kyoto University First it explains species diversity and the functioning of fungi in Asian regions as outlined by metagenomic approaches using next generation sequencing technology The advances in high throughput sequencing technologies accelerate the speed of species inventorying especially for microorganisms Second the study of complex interactions between herbivorous insects and plants in the community and ecosystem contexts is presented Recent studies in community and ecosystem genetics shed light on these complex interactions with novel approaches incorporating genetic perspectives including genetic variation and phenotypic plasticity in plant defenses against herbivores Finally recent studies on speciation processes in insects are described processes that are related to the evolution of particular life history strategies Included is an examination of two hypotheses that may be important in understanding diversification of insect species in heterogeneous environments in space and time This book is a valuable resource especially for ecologists who are interested in species diversity and community structure

The Rise of Birds Sankar Chatterjee,2015-04-01 The most comprehensive account of the origin of ancient and modern birds the living dinosaurs A small set of fossilized bones discovered almost thirty years ago led paleontologist Sankar Chatterjee on a lifelong quest to understand their place in our understanding of the history of life They were clearly the bones of something unusual a bird like creature that lived long long ago in the age of dinosaurs He called it Protoavis and the animal that owned these bones quickly became a contender for the title of oldest known bird In 1997 Chatterjee published his findings in the first edition of The Rise of Birds Since then Chatterjee and his colleagues have searched the world for more transitional bird fossils And they have found them This second edition of The Rise of Birds brings together a treasure trove of fossils that tell us far more about the evolution of birds than we once dreamed possible With no blind allegiance to what he once thought he

knew Chatterjee devours the new evidence and lays out the most compelling version of the birth and evolution of the avian form ever attempted He takes us from Texas to Spain China Mongolia Madagascar Australia Antarctica and Argentina He shows how in the Cretaceous Pompeii of China he was able to reconstruct the origin and evolution of flight of early birds from the feathered dinosaurs that lay among thousands of other amazing fossils Chatterjee takes us to where long hidden bird fossils dwell His compelling occasionally controversial revelations accompanied by spectacular illustrations are a must read for anyone with a serious interest in the evolution of the feathered dinosaurs from vertebrate paleontologists and ornithologists to naturalists and birders
