Flight Maps Adventures With Nature In Modern America:

Flight Maps: adventures With Nature In Modern America Jennifer Jaye Price, 1999-04-22 A quirky brilliant debut book that explores the evolution of our relationship to nature and the ways in which we attach meaning to it today Flight Maps should find its place on any bookshelf with the likes of David Quammen and John McPhee *Flight Maps* Jennifer Price, 2000-04-06 In five sharply drawn chapters Flight Maps charts the ways in which Americans have historically made connections and missed connections with nature Beginning with an extraordinary chapter on the extinction of the Passenger Pigeon and the accompanying belligerent early view of nature's inexhaustibility Price then moves on to discuss the Audubon Society's founding campaign in the 1890s against the extravagant use of stuffed birds to decorate women's hats At the heart of the book is an improbable and extremely witty history of the plastic pink flamingo perhaps the totem of Artifice and Kitsch nevertheless a potent symbol through which to plumb our troublesome yet powerful visions of nature From here the story of the affluent Baby Boomers begins Through an examination of the phenomenal success of The Nature Company TV series such as Northern Exposure and Dr Quinn Medicine Woman and the sport utility vehicle craze the author ruminates on our very American very urbanized and suburbanized needs discontents and desires for meaningful yet artificially constructed connections to nature Witty at times even whimsical Flight Maps is also a sophisticated and meditative archaeology of Americans very real and uneasy desire to make nature meaningful in their lives **A Companion to the Gilded Age and Progressive Era** Christopher McKnight Nichols, Nancy C. Unger, 2022-06-15 A Companion to the Gilded Age and Progressive Era presents a collection of new historiographic essays covering the years between 1877 and 1920 a period which saw the U S emerge from the ashes of Reconstruction to become a world power The single definitive resource for the latest state of knowledge relating to the history and historiography of the Gilded Age and Progressive Era Features contributions by leading scholars in a wide range of relevant specialties Coverage of the period includes geographic social cultural economic political diplomatic ethnic racial gendered religious global and ecological themes and approaches In today's era often referred to as a second Gilded Age this book offers relevant historical analysis of the factors that helped create contemporary society Fills an important chronological gap in period based American history collections **Environmentalism** David Peterson Del

Mar, 2014-05-22 Environmental movements have produced some impressive results including cleaner air and the preservation of selected species and places But movements that challenged western prosperity and comfort seldom made much progress and many radical environmentalists have been unabashed utopianists In this short guide Peterson del Mar untangles this paradox by showing how prosperity is essential to environmentalism Industrialisation made conservation sensible but also drove people to look for meaning in nature even as they consumed its products more relentlessly Hence Englandled the way in both manufacturing and preserving its countryside and the United States created a matchless set of national parks as it became the world's pre eminent economic and military power Environmentalism considers both the

conservation and preservation movements and less organized forms of nature loving from seaside vacations to ecotourism to argue that these activities have commonly distracted us from the hard work of creating a sustainable and sensible relationship with the environment

Picturing Tropical Nature Nancy Stepan, 2001 Picturing Tropical Nature reflects on the work of several nineteenth and twentieth century scientists and artists including Alexander von Humboldt Alfred Russel Wallace Louis Agassiz Sir Patrick Manson and Margaret Mee Their careers illuminate several aspects of tropicalization science and art in the making of tropical pictures the commercial and cultural boom in things tropical in the modern period photographic attempts to represent tropical hybrid races antitropicalism and its role in an emerging environmentalist

sensibility and visual depictions of disease in the new tropical medicine Jacket **Making Sense of Nature** Noel Castree, 2013-08-15 We listen to a cacophony of voices instructing us how to think and feel about nature including our own bodies The news media wildlife documentaries science magazines and environmental NGOs are among those clamouring for our attention But are we empowered by all this knowledge or is our dependence on various communities allowing our thoughts sentiments and activities to be unduly governed by others Making Sense of Nature shows that what we call nature is made sense of for us in ways that make it central to social order social change and social dissent By utilising insights and extended examples from anthropology cultural studies human geography philosophy politics sociology science studies this interdisciplinary text asks whether we can better make sense of nature for ourselves and thus participate more meaningfully in momentous decisions about the future of life human and non human on the planet This book shows how nature can be made sense of without presuming its naturalness The challenge is not so much to rid ourselves of the idea of nature and its collateral concepts such as genes but instead we need to be more alert to how why and with what effects ideas about nature get fashioned and deployed in specific situations Among other things the book deals with science and scientists the mass media and journalists ecotourism literature and cinema environmentalists advertising and big business This innovative text contains numerous case studies and examples from daily life to put theory and subject matter into context as well as study tasks a glossary and suggested further reading The case studies cover a range of topics range from forestry in Canada and Guinea to bestiality in Washington State to how human genetics is reported in Western newspapers to participatory science experiments in the UK Making Sense of Nature will empower readers from a wide range of fields across the social sciences humanities and physical sciences

Protein Machines, Technology, and the Nature of the Future Wyatt Galusky, 2022-07-18 This book explores the relationships between humans chickens and environments in the context of protein production The history of these

relationships reveals them to be increasingly technological which results in humans becoming more responsible for those animals and their environments Understanding this development through the configuration of various kinds of protein machines is key to confronting the kinds of future we wish to promote and the characteristics of the present we wish to sustain The book is organized around narratives that explore the concept of the protein machine with a particular focus on the development of the chicken as it has moved from the field to the factory to the laboratory These transformations are interconnected and culminate in efforts to cultivate meat without the animal Our ultimate goal will be to ask what kind of future does this technology envision and what roles do humans and animals play in it The Nature of Gold Kathryn

Morse,2009-11-23 In 1896 a small group of prospectors discovered a stunningly rich pocket of gold at the confluence of the Klondike and Yukon rivers and in the following two years thousands of individuals traveled to the area hoping to find wealth in a rugged and challenging setting Ever since that time the Klondike Gold Rush especially as portrayed in photographs of long lines of gold seekers marching up Chilkoot Pass has had a hold on the popular imagination In this first environmental history of the gold rush Kathryn Morse describes how the miners got to the Klondike the mining technologies they employed and the complex networks by which they obtained food clothing and tools She looks at the political and economic debates surrounding the valuation of gold and the emerging industrial economy that exploited its extraction in Alaska and explores the ways in which a web of connections among America s transportation supply and marketing industries linked miners to other industrial and agricultural laborers across the country The profound economic and cultural transformations that supported the Alaska Yukon gold rush ultimately reverberate to modern times The story Morse tells is often narrated through the diaries and letters of the miners themselves The daunting challenges of traveling working and surviving in the raw wilderness are illustrated not only by the miners compelling accounts but by newspaper reports and advertisements Seattle played a key role as gateway to the Klondike A public relations campaign lured potential miners to the West and local businesses seized the opportunity to make large profits while thousands of gold seekers streamed through Seattle The drama of the miners journeys north their trials along the gold creeks and their encounters with an extreme climate will appeal not only to scholars of the western environment and of late 19th century industrialism but to readers interested in reliving the vivid adventure of the West s last great gold rush

California Women and Politics Robert W. Cherny, Mary Ann Irwin, Ann Marie Wilson, 2011-05-01 In 1911 as progressivism moved toward its zenith the state of California granted women the right to vote However women's political involvement in California's public life did not begin with suffrage nor did it end there Across the state women had been deeply involved in politics long before suffrage and although their tactics and objectives changed they remained deeply involved thereafter *California Women and Politics* examines the wide array of women's public activism from the 1850s to 1929 including the temperance movement moral reform conservation trade unionism settlement work philanthropy wartime volunteerism and more and reveals unexpected contours to women's politics in California The contributors consider not only white middle class women's organizing but also the politics of working class women and women of color emphasizing that there was not one monolithic women's agenda but rather a multiplicity of women's voices demanding recognition for a variety of causes

Pumpkin Cindy Ott, 2012-12-01 Why do so many Americans drive for miles each autumn to buy a vegetable that they are unlikely to eat While most people around the world eat pumpkin throughout the year North Americans reserve it for holiday pies and other desserts that celebrate the harvest season and the rural past They decorate their houses with pumpkins every autumn and welcome Halloween trick or treaters with elaborately carved jack o lanterns Towns hold annual pumpkin festivals featuring giant pumpkins and carving contests even though few have any historic ties to the crop In this fascinating cultural and natural history Cindy Ott tells the story of the pumpkin Beginning with the myth of the first Thanksgiving she shows how Americans have used the pumpkin to fulfill their desire to maintain connections to nature and to the family farm of lore and ironically how small farms and rural communities have been revitalized in the process And while the pumpkin has inspired American myths and traditions the pumpkin itself has changed because of the ways people have perceived valued and used it *Pumpkin* is a smart and lively study of the deep meanings hidden in common things and their power to make profound changes in the world around us

Chronology of Americans and the Environment Chris J. Magoc, 2011-02-18 Covering the 17th century to the contemporary era this chronological overview of the role of the environment provides many insights into one of the most important aspects of American history Environmental issues such as deforestation water pollution extinction of indigenous animal species and climate change have long existed in the United States Fortunately the American people and their government have demonstrated a willingness to

address environmental concerns Chronology of Americans and the Environment encompasses more than four centuries of dynamic and transformational environmental change that illustrate the central importance of the environment natural resources and nature throughout American history The author provides a chronological overview of the significant events major figures and public policy developments throughout the history of our relationship with the environment illustrating the sequence of historical events cultural ideas and trends that have led Americans to take action to protect the environment and public health This book also touches upon prehistoric occurrences and events prior to the arrival of European explorers that provide context for Native American ideas and attitudes toward nature *Nature's Ghosts* Mark V. Barrow, 2011-04-15 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature's Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson's day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them *Nature's Ghosts* offers an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead *Race, Nature, and the Politics of Difference* Donald S. Moore, Jake Kosek, Anand Pandian, 2003-05-20 A collection of essays that show the interdependence of concepts of race and nature *Nature's State* Susan Kollin, 2018-06-15 An engaging blend of environmental theory and literary studies *Nature's State* looks behind the myth of Alaska as America's last frontier a pristine and wild place on the fringes of our geographical imagination Susan Kollin traces how this seemingly marginal space in American culture has in fact functioned to alleviate larger social anxieties about nature ethnicity and national identity Kollin pays special attention to the ways in which concerns for the environment not only shaped understandings of Alaska but also aided U S nation building projects in the Far North from the late nineteenth century to the present era Beginning in 1867 the year the United States purchased Alaska a variety of literary and cultural texts helped position the region as a crucial staging ground for territorial struggles between native peoples Russians Canadians and Americans In showing how Alaska has functioned as a contested geography

in the nation's spatial imagination Kollin addresses writings by a wide range of figures including early naturalists John Muir and Robert Marshall contemporary nature writers Margaret Murie John McPhee and Barry Lopez adventure writers Jack London and Jon Krakauer and native authors Nora Dauenhauer Robert Davis and Mary TallMountain
