**How should I know?** Kathleen T. Nolan, 2019-02-18 Elementary preservice teachers school experiences of mathematics and science have

shaped their images of knowing including what counts as knowledge and what it means to know in mathematics and science In this book preservice teachers voices challenge the hegemony of official everyday narratives relating to these images The book is written as a parody of a physical science textbook on the topic of light presenting a kaleidoscope of elementary preservice teachers narratives of knowing in mathematics and science These narratives are tied together by the metaphorical thread of the properties of light but also held apart by the tensions and contradictions with in such a critical epistemological exploration Through a postmodern lens the only grand narrative that could be imagined for this text is one in which the personal lived experience narratives of the participants mingle and interweave to create a sort of kaleidoscope of narratives With each turn of a kaleidoscope light's reflection engenders new patterns and emergent designs The narratives of this research text highlight patterns of exclusion gendered messages binary oppositions and the particle nature and shadowy texture of knowing in mathematics and science The presentation format of the book emphasizes the reflexive and polyphonic nature of the research design illustrated through layers of spoken text with in performative text with in metaphorical text The metaphor of a kaleidoscope is an empowering possibility for a critical narrative written to both engage and provoke the reader into imagining a critical journey toward possibilities for a different knowing by heart in mathematics and science and for appreciating lived experience narratives with in teacher education
