

Florida Cow-Calf Management, 2nd Edition - Practicing Good Management¹

Dave Prichard, Ronnie Hartzog, Sharon Fox Gamble and Ed Jennings²

Management techniques, which include animal identification, implanting, vaccinations, castration, and dehorning, should be implemented in as timely and humane a manner as possible. This chapter concentrates on these techniques used on cattle handling.

Cattle Handling

Managing cattle properly and maintaining an adequate herd health program are impossible unless producers have the basic ability to catch and restrain their cattle; producers must possess a working knowledge of cattle behavior. Cattle respond directly to the way they have been handled. Cattle that are handled gently will be quieter and easier to work with at each gathering.

The key to handling cattle is understanding their "flight zone," a surrounding area of personal space that cattle must maintain to feel at ease (Figure 1). An animal moves away from anything that penetrates its flight zone. In an attempt to maintain a constant margin of space between itself and the intruder,

flight zones apply to individual animals and also to bands of animals, where each herd collectively maintains its own flight zone.

Figure 1. Cattle flight zone diagram; point of balance controls movement forward or backward; positions (A) and (B) control starting and stopping.

The size of a flight zone depends upon how wild an animal is. In range cattle, the flight zone can cover a large area, but it might extend only 5 to 20' in cattle
