Science Learning and Instruction Marcia C.

Linn, Bat-Sheva Eylon, 2011-05-20 *Science Learning and Instruction* describes advances in understanding the nature of science learning and their implications for the design of science instruction. The authors show how design patterns, design principles and professional development opportunities coalesce to create and sustain effective instruction in each primary scientific domain: earth science, life science and physical science. Calling for more in depth and less fleeting coverage of science topics in order to accomplish knowledge integration, the book highlights the importance of designing the instructional materials, the examples that are introduced in each scientific domain and the professional development that accompanies these materials. It argues that unless all these efforts are made simultaneously, educators cannot hope to improve science learning outcomes. The book also addresses how many policies, including curriculum standards, guidelines and standardized tests, work against the goal of integrative understanding and discusses opportunities to rethink science education policies based on research findings from instruction that emphasizes such understanding. Computers, Teachers, Peers Marcia C. Linn, Sherry Hsi, 2000-03 Shows how computers, teachers, peers can serve as learning partners helping students build on their ideas, regularly restructure their views. Synthesizes design principles from authors' experience creating the computer as learning partner. Connect, Communicate, Collaborate Judy O'Connell, Dean Groom, 2010-10-01 Our students are involved in an architecture of participation, creating, adapting and sharing content. While for them this learning is a comfortable, multimodal conversation for us, this change is revolutionary. As we begin to understand the importance of these seismic shifts, we come to the realisation that we are being challenged to unlearn and relearn in order to grant students access to 21st century learning. Schools and school libraries have many challenges ahead to renew pedagogy and technology work practices. We hope that Connect, communicate, collaborate will provide the knowledge, inspiration and motivation to get you started. **Digital Capital** Sora Park, 2017-11-10 This book describes and understands the many factors that influence a person's behavior towards digital technologies and how that affects the person's potential to benefit from digital society. The ability to adapt to these new technological environments and the extent to which an individual embraces them has become critical to an individual's well-being and quality of life, the underlying assumption being that only by effectively engaging with digital technologies can the user accrue benefits from the experience. By introducing the concept of digital capital, which refers to the conditions that determine how people access, use and engage with digital technology, Park examines how the digital ecosystem of the user leads to new forms of digital inequality. Using numerous empirical studies on internet users and non-users as well as recommending small, localized solutions to the big global problem, a critical and alternative perspective of the digital divide is provided. **The New Division of Labor** Frank Levy, Richard J. Murnane, 2012-11-26 As the current recession ends, many workers will not be returning to the jobs they once held; those jobs are gone. In *The New Division of Labor*, Frank Levy and Richard Murnane show how computers are changing the employment landscape and how the right kinds of education can ease the transition to the new job market. The book tells stories of people at work, a high-end financial

advisor a customer service representative a pair of successful chefs a cardiologist an automotive mechanic the author Victor Hugo floor traders in a London financial exchange The authors merge these stories with insights from cognitive science computer science and economics to show how computers are enhancing productivity in many jobs even as they eliminate other jobs both directly and by sending work offshore At greatest risk are jobs that can be expressed in programmable rules blue collar clerical and similar work that requires moderate skills and used to pay middle class wages The loss of these jobs leaves a growing division between those who can and cannot earn a good living in the computerized economy Left unchecked the division threatens the nation s democratic institutions The nation s challenge is to recognize this division and to prepare the population for the high wage high skilled jobs that are rapidly growing in number jobs involving extensive problem solving and interpersonal communication Using detailed examples a second grade classroom an IBM managerial training program Cisco Networking Academies the authors describe how these skills can be taught and how our adjustment to the computerized workplace can begin in earnest      *The Digital Youth Network* Brigid Barron, Kimberley Gomez, Nichole Pinkard, Caitlin K. Martin, 2014-07-04 An ambitious project to help economically disadvantaged students develop technical creative and analytical skills across a learning ecology that spans school community home and online The popular image of the digital native usually depicted as a technically savvy and digitally empowered teen is based on the assumption that all young people are equally equipped to become innovators and entrepreneurs Yet young people in low income communities often lack access to the learning opportunities tools and collaborators at school and elsewhere that help digital natives develop the necessary expertise This book describes one approach to address this disparity the Digital Youth Network DYN an ambitious project to help economically disadvantaged middle school students in Chicago develop technical creative and analytical skills across a learning ecology that spans school community home and online The book reports findings from a pioneering mixed method three year study of DYN and how it nurtured imaginative production expertise with digital media tools and the propensity to share these creative capacities with others Through DYN students despite differing interests and identities the gamer the poet the activist were able to find some aspect of DYN that engaged them individually and connected them to one another Finally the authors offer generative suggestions for designers of similar informal learning spaces
