Resource Conservation and Management J. Andrew DeWoody,John W. Bickham,Charles H. Michler,Krista M. Nichols,Gene E. Rhodes,Keith E. Woeste,2010-06-14 Recent advances in molecular genetics and genomics have been embraced by many in natural resource conservation Today several major conservation and management journals are now using genetics editors to deal solely with the influx of manuscripts that employ molecular data The editors have attempted to synthesize some of the major uses of molecular markers in natural resource management in a book targeted not only at scientists but also at individuals actively making conservation and management decisions To that end the text features contributors who are major figures in molecular ecology and evolution many having published books of their own The aim is to direct and distil the thoughts of these outstanding scientists by compiling compelling case histories in molecular ecology as they apply to natural resource management **Species Richness** Jonathan Adams,2010-02-26 This is a readable informative and up to date account of the patterns and controls on biodiversity The author describes major trends in species richness along with uncertainties in current knowledge The various possible explanations for past and present species patterns are discussed and explained in an even handed and accessible way The implications of global climate change and habitat loss are considered along with current strategies for preserving what we have This book examines the state of current understanding of species richness patterns and their explanations As well as the present day world it deals with diversification and extinction in the conservation of species richness and the difficulties of assessing how many species remain to be discovered The scientifically compelling subject of vegetation climate interaction is considered in depth Written in an accessible style the author offers an up to date rigorous and yet eminently comprehensible overview of the ecology and

biogeography of species richness He departs from the often heavy approach of earlier texts without sacrificing rigor and depth of information and analysis Prefacing with the aims of the book Chapter 1 opens with an explanation of latitudinal gradients including a description of major features of the striking gradients in species richness exceptions to the rule explanations major theories and field and experimental tests The following chapter plumbs the depth of time including the nature of the fossil record broad timescale diversity patterns ecosystem changes during mass extinctions and glaciations and their influence on species richness Chapters 3 and 4 consider hotspots and local scale patterns in species richness while Chapter 5 looks at the limitations and uncertainties on current estimates of richness the last frontiers of species diversity and the process of identifying new life forms The last three chapters cover humans and extinctions in history and prehistory current habitat and global change including the greenhouse effect and the race to preserve what we still have including parks gene banks and laws

Blue Carbon Reservoir of the Blue Planet Abhijit Mitra, Sufia Zaman, 2014-11-20 The ever increasing emission of carbon dioxide due to rapid industrialization urbanization unplanned tourism and alteration of land use pattern is causing unprecedented changes to marine biodiversity Irrespective of political philosophy nation caste sex and religion mankind is under the appalling shadow of climate change Today nature based approaches for the mitigation of climate change are increasingly accepted as part of the low cost solution Thrust has been given by several scientific communities to assess the magnitude and viability of carbon sequestering potential of plants Coastal producer communities like mangroves salt marsh grass seagrass beds and seaweeds absorb atmospheric carbon dioxide during the process of photosynthesis This carbon known as the blue carbon is thus associated with the marine and estuarine ecosystems However a number of gaps in our scientific knowledge on blue carbon domain still exist Molluscs coral reefs phytoplankton which are amongst the important storehouses of carbon have not been addressed Very few scientific studies on the carbon stored in these valuable natural vaults have been performed and no data bank is available on their carbon sequestering capacity on global basis The methodologies for assessing blue carbon stock also need further standardization so that credit from blue carbon reservoir is accepted by the International bodies in the form of a concrete policy It is a matter of great appreciation that Conservation International CI the International Union for Conservation of Natural Resources IUCN and the Intergovernmental Oceanic Commission IOC of UNESCO is collaborating with governments research institutions non governmental and international organizations and communities around the world to develop management approaches financial incentives and policy mechanisms for ensuring conservation and restoration of blue carbon ecosystems and

implement projects around the world that demonstrate the feasibility of blue carbon accounting management and incentive agreements The present book has critically presented the data bank for each community of blue carbon not merely in the form of text description but also through case studies that are the outcomes of research projects and pilot programmes
