**NTM - The New Uber-Bugs** Veronique Dartois,Christine Sizemore,Thomas Dick,2019-11-04 Incidence of pulmonary disease caused by nontuberculous mycobacteria NTM such as Mycobacterium abscessus and M avium is increasing at an alarming rate surpassing tuberculosis TB in many countries Treatment durations are extremely long With low sputum conversion rates the outcomes are often disappointing Thus NTM disease resembles extremely drug resistant TB There is an urgent need for increased research on this dreadful disease For this book we brought together experts from a wide range of

disciplines addressing current status gaps and needs and new developments in several NTM relevant research areas We start with the discussion of NTM disease presentations and clinical research This is followed by contributions on epidemiology antibiotic resistance mechanisms drug discovery and development bacteriology and targets and new diagnostic tools We would like to thank the 130 authors for sharing their work and insights We hope that this collection of articles will stimulate discussions and research activities on the challenging lung disease caused by the diverse group of pathogens called NTM

*Tuberculosis E-Book* H. Simon Schaaf,Alimuiddin Zumla,2009-03-24 This book provides all the vital information you need to know about tuberculosis especially in the face of drug resistant strains of the disease Coverage includes which patient populations face an elevated risk of infection as well as which therapies are appropriate and how to correctly monitor ongoing treatment so that patients are cured Properly administer screening tests interpret their results and identify manifestations of the disease with authoritative guidance from expert clinicians from around the world Discusses screening tests for tuberculosis so you can interpret their results and identify not only common manifestations of the disease but also those that are comparatively rare such as tuberculosis in pregnant women Covers all clinical aspects of tuberculosis in children including current practices on managing those infected with HIV Provides details on how best to interact with the public health system in both industrialized and developing countries Addresses the social aspects of tuberculosis and presents the latest advances on new and potential vaccines against tuberculosis Offers the expertise of internationally recognized tuberculosis clinicians to provide you with well rounded global coverage Features numerous illustrations to provide clear and detailed depictions of rare manifestations of tuberculosis      *Research Grants Index* National Institutes of Health (U.S.). Division of Research Grants,1970      *Waterborne Pathogens* Emmanuelle Guillot,Jean-Francois Loret,2009-11-15 Infectious diseases caused by pathogenic bacteria viruses and protozoa are the most common and widespread health risk associated with drinking water Most waterborne pathogens are introduced into drinking water

supplies by human or animal faeces enteric pathogens but they can also exist naturally in water environments as indigenous aquatic micro organisms Controlling the risks related to these pathogens is a permanent challenge for the water industry In addition to the constantly evolving range of pathogens to consider assessing and managing such risks requires the integration of information issued by a wide range of disciplines The necessary knowledge is however still sketchy and incomplete for most pathogens and research efforts are necessary to fill the remaining gaps of knowledge The purpose of this study is to provide an updated comprehensive review of current knowledge on a selection of pathogens of interest for the drinking water industry and to identify the remaining gaps of knowledge and thus the necessary research to be conducted Emphasis has been laid on the information needed to assess and manage the risks related to each of these pathogens in drinking water production and distribution The pathogens considered in this review were selected on the basis of Their recognized or highly suspected transmission by drinking water through ingestion inhalation or contact Their recognized pathogenic character for humans The severity of their health effects Each micro organism in this study is described in a summary fact sheet composed of the following items microbiology human health effects geographical distribution epidemiology ecology inactivation removal surrogates environmental detection and research needs Since much remains unknown about many aspects that are common to viruses the study features a general section on virus research needs A special section summarizes the risk management research conducted on waterborne pathogens Finally the conclusion gives an overview of the main gaps in current knowledge on waterborne pathogens Visit the IWA WaterWiki to read and share material related to this title <http://www.iwawaterwiki.org/xwiki/bin/view/Articles/WaterbornePathogens>

*Detection of Pathogens in Water Using Micro and Nano-Technology* Giampaolo Zuccheri, Nikolaos Asproulis, 2012-08-14 Detection of Pathogens in Water Using Micro and Nano Technology aims to promote the uptake of innovative micro and nano technological approaches towards the development of an integrated cost effective nano biological sensor useful for security and environmental assays The book describes the concerted efforts of a large European research project and the achievements of additional leading research groups The reported knowledge and expertise should support in the innovation and integration of often separated unitary processes Sampling cell lysis and DNA RNA extraction DNA hybridisation detection micro and nanosensors microfluidics together also with computational modelling and risk assessment can be integrated in the framework of the current and evolving European regulations and needs The development and uptake of molecular methods is revolutionizing the field of waterborne pathogens detection commonly performed with time consuming cultural methods The molecular detection methods are enabling the development of integrated instruments based on biosensor that will ultimately automate the full pathway of the microbiological analysis of water Editors Giampaolo Zuccheri University of Bologna Italy and Nikolaos Asproulis Cranfield University UK
