Applied Macroeconometrics Carlo A. Favero, 2001 This text provides graduate students of macroeconomics econometrics and monetary economics with discussion and practical illustrations of the techniques used in applied macroeconometrics Until the 1970s there was consensus regarding both the theoretical foundations and the empirical specification of applied macroeconomic modelling commonly known as the Cowles Commission approach This is no longer the case the Cowles Commission approach broke down in the 1970s to be replaced by a number of prominent competing methods the LSE London School of Economics approach the VAR approach and the intertemporal optimization Real Business Cycle approach Applied Macroeconometrics examines the empirical research strategy of these alternatives by interpreting them as attempts to solve the problems observed in the Cowles Commission approach The different research strategies are illustrated with specific reference to real world examples particularly with respect to the monetary transmission mechanism A common US dataset is used in these examples thus allowing the reader easy comparisons The presentation is based on the view that identification a central concept in econometrics provides a natural framework in which to discuss the alternative strategies currently dominating research The first part of the book introduces time series models and details the importance of their identification The second part illustrates chapter by chapter the alternative approaches providing detailed applications of each methodology Data used in the applications are available in a variety of formats from the author's web site and will be supplemented by exercises for the reader to perform

Applied Econometric Analysis Using Cross Section and Panel Data Deep Mukherjee, 2024-01-03. This book is a collection of 20 chapters on chosen topics from cross section and panel data econometrics. It explores both theoretical and practical aspects of selected cutting edge techniques which are gaining popularity among applied econometricians while following the motto of keeping things simple. Each chapter gives a basic introduction to one such method, directs readers to supplementary references and shows an application. The book takes into account that A. The field of econometrics is evolving very fast and leading textbooks are trying to cover some of the recent developments in revised editions. This book offers basic introduction to state of the art techniques and recent advances in econometric models with detailed applications from various developing and developed countries. B. An applied researcher or practitioner may prefer reference books with a simple introduction to an advanced econometric method or model with no theorems but with a longer discussion on empirical application. Thus an applied econometrics textbook covering these cutting edge methods is highly warranted. A void this book attempts to fill. The book does not aim at providing a comprehensive coverage of econometric methods. The 20 chapters in this book represent only a sample of the important topics in modern econometrics with special focus on econometrics of cross section and panel data while also recognizing that it is not possible to accommodate all types of models and methods even in these two categories. The book is unique as authors have also provided the theoretical background if any and brief literature review behind the empirical applications. It is a must have resource for students and practitioners of modern econometrics.
