Mitchell Polinsky, Steven Shavell, 2007 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to

prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics This two volume Handbook is intended to foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments Source inconnue *The Handbook of Global Shadow Banking, Volume II* Luc Nijs, 2020-06-30 This global handbook provides an up to date and comprehensive overview of shadow banking or market based finance as it has been recently coined Engaging in financial intermediary services outside of normal regulatory parameters the shadow banking sector was arguably a critical factor in causing the 2007 2009 financial crisis This second volume explores three particular domains of shadow banking The first domain deals with the macro economic fundamentals of the respective shadow banking segments Why do they exist what problems do they solve and why are some of their embedded risks so persistent The second domain captures the global dimensions of shadow banking markets reviewing the particularities and specifics of various shadow banking systems around the world Volume II concludes with an extensive overview of how the sector has changed since the financial crisis focusing on regulatory arbitrage contract imperfection and governance Closing on unresolved issues and open ended questions that will no doubt remain prominent in the shadow banking sector for years to come this handbook is a must read for professionals and policy makers within the banking sector as well as those researching economics and finance **Publishers Weekly** ,1973-10 Regulatory Reform in Air Transportation United States. functionally united to resolve international and multifaceted regulatory disputes He identifies the normative foundation of contract law as an important determinant in this process contending that contract law is essentially neutral and underpinned by the concept of corrective justice while economic regulations are mainly prompted by distributive justice Applying this corrective distributive justice dichotomy to international contracts the author critically assesses major conflict of laws approaches such as proper law the Rome Convention and governmental interest analysis which could disregard either public interest or private rights The author taking these theories into account proposes an alternative two dimensional interest analysis approach He tests the viability of this approach with reference to arbitral awards and court decisions in various jurisdictions and concludes that it uniquely fits into the structure of international commercial arbitration In adopting this approach arbitrators would take into account both corrective and distributive justice and to the extent that corrective justice prevails would be able to avert a total failure of the contract
