Sources of Chinese Economic Growth, 1978-1996 Chris Bramall,2000-09-14 This analysis of the political economy of growth in the era of Deng Xiaoping takes issue with the growth accounting methodologies and market centred explanations which characterize so much of the literature on transition era China By adopting an approach which echoes the pioneering work of Chalmers Johnson Alice Amsden and Robert Wade on other East Asian Economies and which makes full use of the rich statistical materials that have become available since 1978 this book shows that Chinese growth was driven by a combination of state led industrial policy and the favourable infrastructural legacies of the Maoist era And in giving due weight to the sheer complexity of the growth process by looking in detail at the experience of four very different Chinese regions it avoids over simplistic macroeconomic generalization Nevertheless even this type of approach is inadequate because it fails to explain why industrial policy has been so much more successful in China than in other countries This book therefore goes beyond the development state approach to argue that state autonomy in China reflected the remarkably equal distribution of income and wealth at the end of the 1970s and paradoxically the destruction of party structures and institutions during the Cultural Revolution The policy implications are stark The Chinese experience demonstrates that industrial policy and state spending on physical and social infrastructure can produce rich rewards conversely slavish reliance on foreign direct investment and trade are likely to limit the pace of growth But attempts to replicate China's success in Latin America sub Saharan Africa and South Asia will fail because their governments will not resist rent seeking by classes and interest groups Moreover as the state becomes weaker in the wake of the re emergence of a powerful capitalist class even Chinese growth may prove unsustainable

decades the world's largest developing nation made significant strides towards the goal of full employment of its labor force by the ability of the agricultural sector to absorb the unemployed Developments in the Asian Rice Economy M. Sombilla, Mahabub Hossain, B. Hardy, 2002 **China's New Sources of Economic Growth: Vol. 2** Ligang Song, Ross Garnaut, Cai Fang, Lauren Johnston, 2017-07-20 China's efforts in searching for new sources of growth are increasingly pressing given the persistence of the growth slowdown in recent years This year's book elucidates key present macroeconomic challenges facing China's economy in 2017 and the impacts and readiness of human capital innovation and technological change in affecting the development of China's economy The book explores the development of human capital as the foundations of China's push into more advanced growth frontiers It also explores the progress of productivity improvement in becoming the primary mechanism by which China can sustain economic growth and explains the importance of China's human capital investments to success on this front The book demonstrates that technical change is a major contributor to productivity growth and that invention and innovation are increasingly driving technical change but so far lumpily across regions sectors and invention motivations Included are chapters providing an update on reform and macroeconomic development educational inequality the role of intangibles in determining China's economic growth and China's progress in transitioning towards being an innovative country The book also covers the regional dimension of innovation and technological progress by sector in agricultural productivity renewable energy and financial markets Chapters on trade investment regional cooperation and foreign aid explore further the mechanisms through which technological change and innovative activities are emerging locally and internationally **The Chinese Economy Under Maoism** Andrew M. Greeley, 2017-07-05 Over sixty years have elapsed since the Communists gained control of the Chinese mainland The years between 1949 and 1969 were a time of constant change and periodic cataclysm the initial purges the Great Leap Forward and the Cultural Revolution all bound up with the Communist conception of how to move the country into modernity in the shortest possible time The Chinese Economy under Maoism summarizes and evaluates the economic consequences of the Communist path to development in a concise factual presentation that can be readily comprehended by non economists The authors review the major features of the Chinese economy prior to the Communist takeover and discuss the policies performance and problems of the individual sectors of the Chinese economy during its initial years under Communism Included in their review are industry agriculture foreign trade resource allocation population employment and living standards A concluding chapter summarizes Chinese economic growth and presents a discussion of future policy alternatives and an optimum economic policy for China Based on important findings of Western scholars with many original interpretations by the authors this material is presented from a developmental point of view Since it was originally published in 1972 sections of the book devoted to comparative studies of progress in India and the former Soviet regime will be of particular interest now Free of technical language and providing insights into the economy of one of the most important
