The Economics of Knowledge Generation and

Distribution Pier Paolo Patrucco, 2014-09-25 Contemporary capitalistic systems have been undergoing profound transformations determined by the transition towards the so called knowledge based economy i.e. a competitive system based on the capabilities firms have to create use and circulate knowledge. These transformations concern both the characteristics of productive and innovative processes and the resources used in these activities. This book captures these changes where traditional R & D investments undertaken internally by firms are increasingly and strategically complemented by external sources of innovation and new knowledge. Collaborations between firms and between firms and other organizations as well as the mobility of human capital are strategic processes in order to share and circulate knowledge and competencies. They are also key determinants in the creation of new knowledge and innovation and ultimately in growth dynamics. The circulation and distribution of knowledge is now a key input in the production of knowledge. Knowledge and innovation are understood as the result of collective and interactive processes at the system level and less at the micro level. In other words, new knowledge production is less and less the result of individualistic behaviours of the firms and much more the effect of explicit and pro-active interactions and transactions put in place by local networks of innovators. In this perspective, economic space is much more defined by the quality of the interactions among actors rather than by their mere technological, sectoral or geographical proximity. This book brings together new conceptual and empirical contributions and blends the analysis of the technological and geographical spaces in which innovation and knowledge are produced. Agriculture and Rural

Development in a Globalizing World Prabhu Pingali, Gershon Feder, 2017-05-08 Rapid structural transformation and urbanization are transforming agriculture and food production in rural areas across the world. This textbook provides a comprehensive review and assessment of the multi-faceted nature of agriculture and rural development, particularly in the developing world where the greatest challenges occur. It is designed around five thematic parts: Agricultural Intensification and Technical Change, Political Economy of Agricultural Policies, Community and Rural Institutions, Agriculture, Nutrition and Health, and Future Relevance of International Institutions. Each chapter presents a detailed but accessible review of the literature on the specific topic and discusses the frontiers in research and institutional changes needed as societies adapt to the transformation processes. All authors are eminent scholars with international reputations who have been actively engaged in the contemporary debates around agricultural development and rural transformation. *Non-Fossil Energy Development in China* Yunzhou Zhang, 2018-11-27 Nonfossil Energy Development in China: Goals and Challenges explores the development of non-fossil energy sources which is very important for China to protect its energy supply, deal with climate change and adjust its energy structure. At present, the development of energy and electricity is undergoing profound change. The core and most prominent feature is the sudden emergence of clean energy exerting a decisive influence on the future energy industry. Due to history and resource limitation, a series of problems in the energy development of China have existed for a long time, such as poor energy structure, serious environmental pollution, large carbon emissions, low energy efficiency, regional supply

and demand imbalances The Chinese government has set the development goal for nonfossil energy to 15% in primary energy consumption in 2020 The connotation and interpretation of the goal possible development scenarios feasible implementation paths and corresponding benefit costs are all the major issues this book explains in detail and demonstrates by models Demonstrates how to safely economically and efficiently meet the Chinese government s energy development target for non fossil energy Analyzes energy development scenarios by using the energy demand and supply model electricity demand forecasting model and power system optimization planning models Focuses on practical problems and algorithms
