**Economics and Mental Health** Thomas G. McGuire, 1999 This paper is concerned with the economics of mental health We argue that mental health economics is like health economics only more so uncertainty and variation in treatments are greater the assumption of patient self interested behavior is more dubious response to financial incentives such as insurance is exacerbated the social consequences and external costs of illness are formidable We elaborate on these statements and consider their implications throughout the chapter Special characteristics of mental illness and persons with mental illness

are identified and related to observations on institutions paying for and providing mental health services We show that adverse selection and moral hazard appear to hit mental health markets with special force We discuss the emergence of new institutions within managed care that address long standing problems in the sector Finally we trace the shifting role of government in this sector of the health economy

Essays on the Economics of Mental Illness and Belief Formation Matthew White Ridley (Scientist in economics), 2022 This thesis consists of three chapters Chapters 1 and 2 study questions relating to the economics of mental illness while Chapter 3 contributes to the literature on the behavioral economics of belief formation The first chapter studies why people who live in poverty are disproportionately affected by mental illness Gautam Rao Frank Schilbach Vikram Patel and I review the interdisciplinary evidence of the bidirectional causal relationship between poverty and common mental illnesses depression and anxiety and the underlying mechanisms Our review shows that mental

illness reduces employment and therefore income and that psychological interventions generate economic gains Similarly negative economic shocks cause mental illness and anti poverty programs such as cash transfers improve mental health A crucial step toward the design of effective policies is to better understand the mechanisms underlying these causal effects In the second chapter I study discrimination against people with common mental illnesses in labor market settings one important mechanism through which mental illness may indirectly cause lower employment and income In an online experiment I find that people pay to avoid depressed or anxious coworkers in a simple communication based problem solving task paying as much to avoid them as they do to work with the college educated A model of earnings maximizing statistical discrimination with correct beliefs cannot explain these preferences depressed or anxious coworkers are equally productive when exogenously assigned Instead I find evidence that discrimination is driven by incorrect beliefs about such coworkers as well as an increase in costly effort when working with them A major motivation for tackling discrimination is often to encourage revelation of mental illness thereby perhaps improving access to treatment or support however I find that people pay to hide mental illness in my setting even when insulated from rejection or any financial consequence of discrimination In the third chapter of my thesis John Conlon Malavika Mani Gautam Rao Frank Schilbach and I study social learning between spouses using an experiment in Chennai India We vary whether individuals discover information themselves or must instead learn what their spouse discovered via a discussion Women treat their own and their husband s information the same In sharp contrast men s beliefs respond less than half as much to information that was discovered by their wife This is not due to a lack of communication husbands put less weight on their wife s signals even when perfectly informed of them In a second experiment when paired with mixed and same gender strangers both men and women heavily discount their teammate s information relative to their own We conclude that people have a tendency to underweight others information relative to their own The marital context creates a countervailing force for women resulting in a gender difference in learning only in the household

**Economics of Schizophrenia** Massimo Moscarelli,1998      **The Economic Evaluation of Mental Health Care** Martin R. J. Knapp,1995 This work analyzes the economics of mental health care covering areas such as cost analysis methods estimating costs evaluation of psychiatric reprovisioning comparative equity on community based care reduced list costing decision analysis and an evaluation of costs from 1860 to 1986      **Handbook of Mental Health Economics and Health Policy, Schizophrenia** M. Moscarelli,A. Rupp,N. Sartorius,1996-05-27 This book examines clinical and economic studies focusing on the management of this disorder Useful for decision makers in the mental health sector      [Economic Analysis of Mental Health in China](#) Xuezheng Qin,Chee-Ruey Hsieh,2023-08-08 This book uses an economic approach to analyze the socioeconomic causes and consequences of mental health disorders in China with a special focus on mental depression Based on a nationally representative dataset we first investigate the prevalence and distribution of depression and depressive symptoms among China s adult population and then use several econometric methods to

estimate the multi dimensional disease burden of the mental disorder such as its direct medical costs its indirect economic costs and its hidden costs on social trust and life satisfaction In addition we specifically address the socioeconomic determinants of mental health by examining how the relative and absolute economic status may determine people s mental depression Lastly we propose an analytical framework to evaluate the four major hurdles that cause the treatment gaps of mental health care and discuss the policy options to overcome such hurdles and to address the unmet mental healthcare needs in China and other developing countries The book may facilitate our understanding on the complex determinants and implications of the rising prevalence of mental health disorders in developing countries like China In addition to the students teachers and researchers in the fields of health economics and public health the book may also be of interest to health policy makers and non government agencies who are concerned with addressing the global mental healthcare challenges using economic policy tools
