The book provides an introduction to Communist China, setting its spatial and environmental themes in the historical, political, and economic framework so crucial to a proper understanding of this country and the fifth of the world's population it contains. It is particularly suited to courses on China, its geography, and development strategy. After the bloody events of Tiananmen Square in June 1989, China's geopolitics will continue to hold the world's attention. With this in view, the book also provides guides to further reading.

Routledge International Handbook of Complexity Economics Ping Chen, Wolfram Elsner, Andreas Pyka, 2024-11-29. The Routledge International Handbook of Complexity Economics covers the historical developments and early concerns of complexity theorists and brings them into engagement with the world today. In this volume, a distinguished group of international scholars explore the state of the art of complexity economics and how it may deliver new and relevant insights to the challenges of the 21st century. Complexity science started in 1899 when Henri Poincaré described the three-body problem. The first approaches in economics emerged somewhat later in the 1980s, driven by the Brussels-Austin school. Since then, complexity economics has gone through numerous developments, departing from linear simplifications, applying physical algorithms to evolutionary economics, and big data. This book covers the basic principles and methods and offers an overview of the various domains, ranging from diverse fields of productivity studies, agricultural economics, to monetary economics, as well as the current challenges such as climate change, epidemics, and economic inequality, where complexity economics can provide insight. It closes with a review of complexity, political economy, and policy. Offering a vibrant alternative to orthodox economics, this handbook is a crucial resource for advanced students, researchers, and economists across the disciplines of heterodox economics, economic theory, and econophysics.
