Pickett,Richard S. Ostfeld,Moshe Shachak,Gene E. Likens,2012-12-06 From its inception the U S Department of the Interior has been charged with a conflicting mission One set of statutes demands that the department must develop America s lands that it get our trees water oil and minerals out into the marketplace Yet an opposing set of laws orders us to conserve these same resources to preserve them for the long term and to consider the noncommodity values of our public landscape That dichotomy between rapid exploitation and long term protection demands what I see as the most significant policy departure of my tenure in office the use of science interdisciplinary science as the primary basis for land management decisions For more than a century that has not been the case Instead we have managed this dichotomy by compartmentalizing the American landscape Congress and my predecessors handled resource conflicts by drawing enclosures We ll create a national park here they said and we ll put a wildlife refuge over there Simple enough as far as protection goes And outside those protected areas the message was equally simplistic Y all come and get it Have at it The nature and the pace of the resource extraction was not at issue if you could find it it was yours

Evaluation of Soil Organic Matter Models David S. Powlson, Pete Smith, Jo U. Smith, 2013-06-29 Soil organic matter SOM represents a major pool of carbon within the biosphere roughly twice than in atmospheric CO₂ SOM models embody our best understanding of soil carbon dynamics and are needed to predict how global environmental change will influence soil carbon stocks These models are also required for evaluating the likely effectiveness of different mitigation options The first important step towards systematically evaluating the suitability of SOM models for these purposes is to test their simulations against real data Since changes in SOM occur slowly long term datasets are required This volume brings together leading SOM model developers and experimentalists to test SOM models using long term datasets from diverse ecosystems land uses and climatic zones within the temperate region
