International Institute of Public Finance. Congress, 1989 The topic of the 43rd Congress of the International Institute of Public Finance was Public Finance and the Performance of Enterprises The title reflected profound changes in the thinking and approaches of economists traced back to economic developments such as the worldwide slowing down of economic growth dwindling of productivity increases growing unemployment and rampant increase in public debt experienced during the 1970s and 80s The Congress was not primarily concerned therefore with the economic efficiency of particular enterprises but with the interface of Public Finance and the behavior of enterprises The intent was to detect how fiscal policy decisions effect the behavior of enterprises and how this in turn influences the overall performance of an economy to seek microeconomic foundations for macroeconomic relationships This volume presents the proceedings of the 43rd Congress with papers from numerous international contributors *Moving to Markets in Environmental Regulation* Jody Freeman, Charles D. Kolstad, 2007 Publisher description [The Routledge Handbook of Environmental Economics in Asia](#)

Shunsuke Managi,2015-02-11 Problems of climate change biodiversity and air pollution are clearly growing globally but more particularly in Asia because of its economic importance and richness in nature The increasing interest in environmental and resource economics applied in regions of Asia will make this book an outstanding resource to the existing literature particularly in the fields of environmental and resource economics and the integration of applied content in traditional and agricultural development At present there is no single handbook or text on the state of current knowledge in environmental economics in Asia or one which offers a comprehensive guide to students and academics on the subjects of environmental economics research This book will help to fill the gap in the existing literature The Drama of the Commons National Research Council,Division of Behavioral and Social Sciences and Education,Committee on the Human Dimensions of Global Change,2002-03-15 The tragedy of the commons is a central concept in human ecology and the study of the environment It has had tremendous value for stimulating research but it only describes the reality of human environment interactions in special situations Research over the past thirty years has helped clarify how human motivations rules governing access to resources the structure of social organizations and the resource systems themselves interact to determine whether or not the many dramas of the commons end happily In this book leaders in the field review the evidence from several disciplines and many lines of research and present a state of the art assessment They summarize lessons learned and identify the major challenges facing any system of governance for resource management They also highlight the major challenges for the next decade making knowledge development more systematic understanding institutions dynamically considering a broader range of resources such as global and technological commons and taking into account the effects of social and historical context This book will be a valuable and accessible introduction to the field for students and a resource for advanced researchers

The Politics of Carbon Markets Benjamin Stephan,Richard Lane,2014-08-27 The carbon markets are in the middle of a fundamental crisis a crisis marked by collapsing prices fleeing actors and ever increasing greenhouse gas levels Yet carbon trading remains at the heart of global attempts to respond to climate change Not only this but markets continue to proliferate particularly in the Global South The Politics of Carbon Markets helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets First the markets must be understood in relation to the politics involved in their development maintenance and opposition Second this politics is multiform and pervasive Implementation of new techniques and measuring tools policy development and contestation and the structuring context of institutional settings and macro social forces all involve a variety of political actors and create new forms of political agency The contributions study the total extent of the carbon markets from their prehistory to their contemporary expansion and wider impacts This wide ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets climate change governance and environmental politics **Environmental Policy and Industrial Innovation** David Wallace,2017-10-19 This book originally published in 1995 examines the evolution of environmental policy in 6 OECD
