Emotion, Social Relationships, and Health Carol D. Ryff Professor of Psychology University of Wisconsin-Madison, Burton Singer Office of Population Research Princeton University, 2001-05-03 A growing literature in humans and animals documents linkages between social integration and affiliative relationships and a variety of health and disease outcomes including mortality The actual mechanisms through which these efforts occur are however not well understood Emotion likely plays a central role in mediating connections between relational experiences underlying neurobiological processes and health outcomes Many prior studies have focused on the size and proximity of social networks thereby neglecting their emotional features When studied emotion in social relationships has also been heavily weighted on the side of negative and conflicting interactions thus giving minimal attention to the possible protective benefits of enduring love nurturing and affection This volume brings together for the first time these differing lines of inquiry to advance understanding of how emotion in significant social relationships influences health The collection integrates knowledge from those with expertise in mapping the nature of emotional experience in human relations with those who are linking social ties to health outcomes and those who explicate underlying neurobiological mechanisms A main message of the book is that full explication of how emotion social relationships and health are woven together demands multidisciplinary inquiry To this end the volume brings together leading experts from fields of affective science clinical and social psychology epidemiology psychiatry psychoneuroimmunology psychoneuroendocrinology and health to promote the above synthesis Some address how to formulate observe and evaluate social interactions in clinical laboratory or daily life contexts Others link emotional experience in significant social relationships to health outcomes or intervening biological parameters Still others manipulate social environments or exposure to health challenge to assess impact on respiratory infections and immune function Collectively each contributes different pieces to the larger puzzle that connects emotion in social relationships to health Recurrent themes include the importance of attending to 1 both positive and negative emotional experience in significant social relationships and how they influence underlying mechanisms 2 cumulative emotional experience namely the repeated chronic nature of socioemotional

experience both positive and negative 3 gender differences in how emotion in social relationships is experienced and how it effects underlying mechanisms involved in health outcomes and 4 the need for multiple methodologies to advance the emotion social relationships and health agenda

Social Intelligence Daniel Goleman, 2006-09-26 Emotional Intelligence was an international phenomenon appearing on the New York Times bestseller list for over a year and selling more than five million copies worldwide Now once again Daniel Goleman has written a groundbreaking synthesis of the latest findings in biology and brain science revealing that we are wired to connect and the surprisingly deep impact of our relationships on every aspect of our lives Far more than we are consciously aware our daily encounters with parents spouses bosses and even strangers shape our brains and affect cells throughout our bodies down to the level of our genes for good or ill In Social Intelligence Daniel Goleman explores an emerging new science with startling implications for our interpersonal world Its most fundamental discovery we are designed for sociability constantly engaged in a neural ballet that connects us brain to brain with those around us Our reactions to others and theirs to us have a far reaching biological impact sending out cascades of hormones that regulate everything from our hearts to our immune systems making good relationships act like vitamins and bad relationships like poisons We can catch other people's emotions the way we catch a cold and the consequences of isolation or relentless social stress can be life shortening Goleman explains the surprising accuracy of first impressions the basis of charisma and emotional power the complexity of sexual attraction and how we detect lies He

describes the dark side of social intelligence from narcissism to Machiavellianism and psychopathy. He also reveals our astonishing capacity for mindsight as well as the tragedy of those like autistic children whose mindsight is impaired. Is there a way to raise our children to be happy? What is the basis of a nourishing marriage? How can business leaders and teachers inspire the best in those they lead and teach? How can groups divided by prejudice and hatred come to live together in peace? The answers to these questions may not be as elusive as we once thought. And Goleman delivers his most heartening news with powerful conviction: we humans have a built-in bias toward empathy, cooperation, and altruism provided we develop the social intelligence to nurture these capacities in ourselves and others.
