sex roles they have consistently neglected the study of romantic love Lystra fills this gap by describing in vivid detail what it meant to fall in love in Victorian America Based on a vast array of love letters the book reveals the existence of a real openness even playfulness between male and female lovers which challenges and expands more traditional views of middle class private life in Victorian America Lystra refutes the common belief that Victorian men and women held passionlessness as an ideal in their romantic relationships Enabling us to enter the hidden world of Victorian lovers the letters they left behind offer genuine proof of the intensity of their most private interactions feelings behaviors and judgments Lystra discusses how Victorians anthropomorphized love letters treating them as actual visits from their lovers insisting on reading them in seclusion sometimes kissing them as Albert does with Violet s and even taking them to bed She also explores how courtship rituals which included the setting and passing of tests of love succeeded in building unique emotional bonds between lovers and how middle class views of romantic love which encouraged sharing knowledge and intimacy gave women more power in the home Through the medium of love letters Searching the Heart allows us to enter unnoticed the Victorian bedroom and parlor We will leave with a different view of middle class Victorian America

Positive Emotional Power
Stanley Humphreys Ainsworth,1981 The Source of My Strength Charles F. Stanley, **Gender, Emotion, and the Family** Leslie Brody,2009-07-01 Do women express their feelings more than men Popular stereotypes say they do but in this provocative book Leslie Brody breaks with conventional wisdom Integrating a wealth of perspectives and research biological sociocultural developmental her work explores the nature and extent of gender differences in emotional expression as well as the endlessly complex question of how such differences come about Nurture far more than nature emerges here as the stronger force in fashioning gender differences in emotional expression Brody shows that whether and how men and women express their feelings varies widely from situation to situation and from culture to culture and depends on a number of particular characteristics including age ethnicity cultural background power and status Especially pertinent is the organization of the family in which boys and girls elicit and absorb different emotional strategies Brody also examines the importance of gender roles whether in the family the peer group or the culture at large as men and women use various patterns of emotional expression to adapt to power and status imbalances Lucid and level headed Gender Emotion and the Family offers an unusually rich and nuanced picture of the great range of male and female emotional styles and the variety of the human character

Components of emotional meaning Johnny J. R. Fontaine,Klaus R. Scherer,Cristina Soriano,2013-08-01 Publications on emotion and the affective sciences in general have exploded in the last decade Numerous research teams and individual scholars from many different disciplines have published research papers or books about many different aspects of emotions and their role in behaviour and society However One aspect of emotional research that has been somewhat neglected is the way in which emotional terms translate into other languages When using terms like anger sadness fear disgust and joy for so called basic emotions as well as terms like shame guilt pride regret and contempt for

more complex emotions it is naturally assumed that the emotion terms used for research in the native language of the researchers and translated into English are completely equivalent in meaning. However, this is not generally the case. In many cases, there is no direct one-to-one relationship between an English term and a term in an alternative language. In fact, there can be significant differences in the way that these seemingly similar emotional terms can be applied across various languages with important implications for how we review and appraise this work. This book presents an extensive cross-cultural and cross-linguistic review of the meaning of emotion words adopting a novel methodological approach. Based on the Component Process Model, the authors developed a new instrument to assess the meaning of emotion terms. This instrument, the GRID questionnaire, consists of a grid of 24 emotion terms spanning the emotion domain and 142 emotion features that operationalize five emotion components: Appraisals, Bodily reactions, Expressions, Action tendencies, and Feelings. For the operationalization of these five emotion components, very different emotion models from the Western and the cultural comparative emotion literature were taken into account. Components of Emotional Meaning includes contributions from psychological, cultural comparative, and linguistic perspectives demonstrating how this new instrument can be used to empirically study very different research questions on the meaning of emotion terms. The implications of the results for major theoretical debates on emotion are also discussed. For all researchers in the affective sciences, this book is an important new reference work.
