Memory and Emotion James L. McGaugh, 2003 Memories come in many different forms and vary substantially in strength some such as where you put your car keys can be brief while others remain in the mind forever James McGaugh a leading neurobiologist provides an accessible and thought provoking look at how we remember and why we forget Beginning with the first scientific studies of learning and ending with the latest cutting edge research he explores how memories are made and preserved why some experiences fade and disappear with time how stress hormones effect the consolidation of memory whether drugs would improve our ability to learn and what studies of extraordinary memories and disorders tell us about the workings of the brain systems involved in memory formation

Emotions and Memory David Rapaport, 1950 *Emotional Memory Across the Adult Lifespan* Elizabeth A. Kensinger, 2008-12-15 Though many factors can influence the likelihood that we remember a past experience one critical determinant is whether the experience caused us to have an emotional response Emotional experiences are more likely to be remembered than nonemotional ones and over the past couple of decades there has been an increased interest in understanding how emotion conveys this memory benefit This book begins with a broad overview of emotion memory and the neural underpinnings of each providing the reader with an appreciation of the complex interplay between emotion and memory It then examines how emotion influences young adults abilities to store information temporarily or over the long

term It explains emotion's influence on the memory processes that young adults use consciously and on the processes that guide young adults' preferences and actions without their awareness This book then moves on to describe how each of these influences of emotion are affected by the aging process and by age-related disease providing the reader with a lifespan perspective of emotional memory Within each of the domains covered the book integrates research from cognitive psychology cognitive neuroscience and neuropsychological perspectives examining both the behavioral and thought processes that lead to emotion's effects on memory and also the underlying brain processes that guide those influences of emotion This book will be of interest to researchers and graduate students in memory emotion and aging working in the fields of cognitive psychology cognitive or affective neuroscience and developmental or lifespan psychology **The**

Fivush, 2009-04-09 The question of how well children recall and can discuss emotional experiences is one with numerous theoretical and applied implications Theoretically the role of emotions generally and emotional distress specifically in children's emerging cognitive abilities has implications for understanding how children attend to and process information how children react to emotional information and how that information affects their development and functioning over time Practically speaking increasing numbers of children have been involved in legal settings as victims or witnesses to violence highlighting the need to determine the extent to which children's eyewitness reports of traumatic experiences are accurate and complete In clinical contexts the ability to narrate emotional events is emerging as a significant predictor of psychological outcomes How children learn to describe emotional experiences and the extent to which they can do so coherently thus has important implications for clinical interventions *Memory and Emotion* Bob Uttil, Nobuo Ohta, Amy
