**Supports** Glenn A. Nicholson, 1985 This report describes an empirical constitutive model for underground excavations in rock which equates the deformation modulus to the ratio of the deviator stress to axial strain The model requires failure criteria which define both the deviator stress at failure and strain at failure Available failure criterion allows reasonable estimates of deviator stress for intact rock as well as rock mass However a failure criterion for estimating strains at failure for rock does not exist Thus this report examines the feasibility of developing a strain based failure criterion for rock Stress strain responses for two rock types sandstone and granite were evaluated Reasonable correlations were found to exist between axial strain at failure normalized with respect to unconfined compressive axial strain at failure and the following 1 Maximum shear stress normalized with respect to the unconfined compressive strength 2 Minor principal stress confining stress normalized with respect to the unconfined compressive strength Author **Rock Failure Mechanisms** Chun'An Tang, John A. Hudson, 2010-08-06 When dealing with rock in civil engineering mining engineering and other engineering the process by which the rock fails under load should be understood so that safe structures can be built on and in the rock However there are many ways for loading rock and rock can have a variety of idiosyncracies This reference book provides engineers and r **Failure Mechanism and Stability Analysis of Rock Slope** Ke Zhang, 2020-07-02 This book presents in depth coverage of laboratory experiments theories modeling techniques and practices for the analysis and design of rock slopes in complex geological settings It addresses new concepts in connection with the kinematical element method discontinuity kinematical element method integrated karst cave stochastic model limit equilibrium method improved strength reduction method and fracture mechanics method taking into account the relevant geological features The book is chiefly
