Environmental Infrastructure in African History Emmanuel Kreike, 2013-05-13 Environmental Infrastructure in African History offers a new approach for analyzing and narrating environmental change Environmental change conventionally is understood as occurring in a linear fashion moving from a state of more nature to a state of less nature and more culture In this model non Western and premodern societies live off natural resources whereas more modern societies rely on artifact or nature that is transformed and domesticated through science and technology into culture In contrast Emmanuel Kreike argues that both non Western and premodern societies inhabit a dynamic middle ground between nature and culture He asserts that humans in collaboration with plants animals and other animate and inanimate forces create environmental infrastructure that constantly is remade and reimagined in the face of ongoing processes of change

National Science Foundation (U.S.),1992 Historical Ecology Guillaume Decocq,2022-10-11 This book addresses present day landscapes ecosystem functioning and biodiversity as legacies of the past It implements an interdisciplinary approach to understand how natural or human impacted ecological systems have changed over time Historical Ecology combines theory methods regional case studies and syntheses to provide a complete up to date overview of historical ecology Beginning with the crucial role of time and inference from observed patterns the book critically reviews the main methodological approaches including monitoring of permanent plots analysis of old maps repeat photography remote sensing soil analysis charcoal analysis botanical indicators and combinations of these methods applied to forest ecosystems A series of case studies from various biomes shows how historical ecology can help in understanding today s socio ecosystems such as mainland and island forests orchards tundra and coastal dunes The book concludes by showing how historical ecology can answer timely fundamental research questions and provide science based evidence for landscape and ecosystem management

Conservation Concepts Kurt Jax,2023-10-31 This book provides a review of the multitude of conservation concepts both from a scientific philosophical and social science perspective asking how we want to shape our relationships with nature as humans and providing guidance on which conservation approaches can help us to do this Nature conservation is a contested terrain and there is not only one idea about what constitutes conservation but many different ones which sometimes are conflicting Employing a conceptual and historical analysis this book sorts and interprets the differing conservation concepts with a special emphasis on narrative analysis as a means for describing human nature relationships and for linking conservation science to practice and to society at large Case studies illustrate the philosophical issues and help to analyse major controversies in conservation biology While the main focus is on Western ideas of conservation the book also touches upon non Western including indigenous concepts The approach taken in this book emphasises the often implicit strategic and

societal dimensions of conservation concepts including power relations In finding a path through the multitude of concepts the book showcases that it is necessary to maintain the plurality of approaches in order to successfully address different situations and societal choices Overall this book highlights the very tension which conservation biology must withstand between science and society between what is possible and what we want individually or as a society or even more what is desirable Bringing some order into this multitude will support more efficient conservation and conservation biology This book will be of great interest to students and scholars studying nature conservation from a variety of disciplines including biology ecology anthropology sociology geography and philosophy It will also be of use to professionals wanting to gain an understanding of the broad spectrum of conservation concepts and approaches and when to apply them

Stressors in the Marine Environment Martin Solan, Nia Whiteley, 2016-03-10 A multitude of direct and indirect human influences have significantly altered the environmental conditions composition and diversity of marine communities However understanding and predicting the combined impacts of single and multiple stressors is particularly challenging because observed ecological feedbacks are underpinned by a number of physiological and behavioural responses that reflect stressor type severity and timing Furthermore integration between the traditional domains of physiology and ecology tends to be fragmented and focused towards the effects of a specific stressor or set of circumstances This novel volume summarises the latest research in the physiological and ecological responses of marine species to a comprehensive range of marine stressors including chemical and noise pollution ocean acidification hypoxia UV radiation thermal and salinity stress before providing a perspective on future outcomes for some of the most pressing environmental issues facing society today Stressors in the Marine Environment synthesises the combined expertise of a range of international researchers providing a truly interdisciplinary and accessible summary of the field It is essential reading for graduate students as well as professional researchers in environmental physiology ecology marine biology conservation biology and marine resource management It will also be of particular relevance and use to the regulatory agencies and authorities tasked with managing the marine environment including social scientists and environmental economists

Terrestrial Ecosystem Ecology Göran I. Ågren, Folke O. Andersson, 2012 Explains the structure function and dynamics of terrestrial ecosystems and demonstrates the application of ecosystem ecology to current environmental problems

Novel Ecosystems Richard J. Hobbs, Eric S. Higgs, Carol Hall, 2013-01-07 Land conversion climate change and species invasions are contributing to the widespread emergence of novel ecosystems which demand a shift in how we think about traditional approaches to conservation restoration and environmental management They are novel because they exist without historical precedents and are self sustaining Traditional approaches emphasizing native species and historical continuity are challenged by novel ecosystems that deliver critical ecosystem services or are simply immune to practical restorative efforts Some fear that by raising the issue of novel ecosystems we are simply paving the way for a more laissez faire attitude to conservation and restoration

Regardless of the range of views and perceptions about novel ecosystems their existence is becoming ever more obvious and prevalent in today's rapidly changing world. In this first comprehensive volume to look at the ecological, social, cultural, ethical and policy dimensions of novel ecosystems, the authors argue these altered systems are overdue for careful analysis and that we need to figure out how to intervene in them responsibly. This book brings together researchers from a range of disciplines together with practitioners and policy makers to explore the questions surrounding novel ecosystems. It includes chapters on key concepts and methodologies for deciding when and how to intervene in systems as well as a rich collection of case studies and perspective pieces. It will be a valuable resource for researchers, managers and policy makers interested in the question of how humanity manages and restores ecosystems in a rapidly changing world. Departments of Veterans Affairs and Housing and Urban Development and Independent Agencies Appropriations for Fiscal Year 1997 United States. Congress. Senate. Committee on Appropriations. Subcommittee on VA-HUD-Independent Agencies, 1997. **Law and Ecology** Richard O. Brooks, Ross Jones, 2017-07-05. In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws. In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature. This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines. This description is followed by a history of their episodic interactions: the early period of origin, the mid-century formative period from 1950 to 1970, the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades. Utilizing a number of case studies, examinations of the key linkage persons, legal instruments and the migration of ecological concepts and frameworks, this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law. Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research, this clearly structured, comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law. **University Curricula in the Marine Sciences and Related Fields**, 1973.
