**Freshwater Fisheries Ecology** John F. Craig, 2015-11-09 Inland fisheries are vital for the livelihoods and food resources of humans worldwide but their importance is underestimated probably because large numbers of small local operators are involved Freshwater Fisheries Ecology defines what we have globally what we are going to lose and mitigate for and what given the right tools we can save To estimate potential production the dynamics of freshwater ecosystems rivers lakes and estuaries need to be understood These dynamics are diverse as are the earth's freshwater fisheries resources from boreal to tropical regions and these influence how fisheries are both utilized and abused Three main types of fisheries are illustrated within the book artisanal commercial and recreational and the tools which have evolved for fisheries governance and management including assessment methods are described The book also covers in detail fisheries development providing information on improving fisheries through environmental and habitat evaluation enhancement and rehabilitation aquaculture genetically modified fishes and sustainability The book thoroughly reviews the negative impacts on fisheries including excessive harvesting climate change toxicology impoundments barriers and abstractions non native species and eutrophication Finally key areas of future research are outlined Freshwater Fisheries Ecology is truly a landmark publication containing contributions from over 100 leading experts and supported by the Fisheries Society of the British Isles The global approach makes this book essential reading for fish biologists fisheries scientists and ecologists and upper level students in these disciplines Libraries in all universities and research establishments where biological and fisheries sciences are studied and taught should have multiple copies of this hugely valuable resource About the Editor John Craig is Editor in Chief of the Journal of Fish Biology and has an enormous range of expertise and a wealth of knowledge of freshwater fishes and their ecology having studied them around the globe including in Asia North America Africa the Middle East and Europe His particular interests have been in population dynamics and life history strategies He is a Fellow of the Linnean Society of London and the Royal Society of Biology

**Ecological Networks** Mercedes Pascual, Jennifer A. Dunne, 2006 Food webs are one of the most useful and challenging objects of study in ecology These networks of predator prey interactions conjured in Darwin's image of a tangled bank provide a paradigmatic example of complex adaptive systems This book is based on a February

2004 Santa Fe Institute workshop Its authors treat the ecology of predator prey interactions food web theory structure and dynamics The book explores the boundaries of what is known of the relationship between structure and dynamics in ecological networks and will define directions for future developments in this field *Handbook of Environmental Data and Ecological Parameters* S. E. Jørgensen, 2013-10-02 Environmental Sciences and Applications Volume 6 Handbook of Environmental Data and Ecological Parameters presents the biological effects of chemical compounds and the physical environment This book provides a list of the most important compounds from an environmental point of view Organized into seven parts this volume begins with an overview of the living organisms in the natural environment This text then explores the ecosphere including the element cycles and general properties of chemical compound in the ecosphere Other parts consider the biological half life time of various chemical compounds and present the toxicological data of specific importance to environmental problems This book discusses as well the chemical compounds that are related to species The final part deals with the dynamics of environment and contains equilibrium data which is often the point of departure for a dynamical description This book is a valuable resource for chemists biologists ecologists scientists and research workers **2024-25**

National Research Council Canada, Canada. Department of Fisheries and Oceans, 1993 Up to date information knowledge and research in progress in scientific fields related to natural production of juvenile Atlantic salmon and some other ecologically similar fluvial salmonids is contained in the 25 papers and 12 abstracts contained in this publication which were prepared for an international symposium held in St John s Newfoundland Studies relate to stream ecology invertebrates and predators habitat improvement competitive effects behaviour and dispersal habitat and production of juvenile salmon population dynamics and relationships of juvenile salmon estimates to smolt yields A list of participants at the conference is also provided

*Vegetation Ecology of Central Europe* Heinz Ellenberg, 1988-07-29 No other book discusses so many principles relevant not only to plant ecologists in continental Europe but in the British Isles and North America

*Corridor Ecology, Second Edition* Jodi A. Hilty, Annika T.H. Keeley, William Z. Lidicker Jr., Adina M. Merenlender, 2019-04-23 Migrating wildlife

species across the globe face a dire predicament as their traditional migratory routes are cut off by human encroachment Forced into smaller and smaller patches of habitat they must compete more aggressively for dwindling food resources and territory This is more than just an unfortunate side effect of human progress As key species populations dwindle ecosystems

are losing resilience and face collapse and along with them the ecosystem services we depend on Healthy ecosystems need healthy wildlife populations One possible answer Wildlife corridors that connect fragmented landscapes This new and

expanded second edition of *Corridor Ecology Linking Landscapes for Biodiversity Conservation and Climate Adaptation* captures the many advances in the field over the past ten years It builds on concepts presented in the first edition on the

importance and practical details of maintaining and restoring land connectivity New to this edition is a guest edited chapter on ecological connectivity in oceans including a detailed discussion on pelagic marine corridors and how coastal corridors

can provide critical connectivity between marine protected areas Another new chapter considers the effects of climate change on habitat and offers recommendations on designing effective corridors as landscapes change with shifting climate

conditions The book also includes a discussion of corridors in the air for migrating flying species from birds to bats butterflies and even plant propagules a concept so new that a term to describe it has yet to be coined All chapters are

thoroughly revised and updated Practitioners as well as serious scholars of landscape ecology and the science of protecting biodiversity will find this new edition of corridor ecology science an indispensable resource

*Ecological Impacts of Toxic Chemicals* Francisco Sánchez-Bayo, Paul J. van den Brink, Reinier M. Mann, 2011 *Ecological Impacts of Toxic Chemicals*

presents a comprehensive yet readable account of the known disturbances caused by all kinds of toxic chemicals on both aquatic and terrestrial ecosystems Topics cover the sources of toxicants their fate and distribution through the planet their

impacts on specific ecosystems and their remediation by natural systems Each chapter is written by well known specialists in those areas for the general public students and even scientists from outside this field The book intends to raise awareness of

the dangers of chemical pollution in a world dominated by industry and globalization of resources Because the problems are widespread and far reaching it is hoped that confronting the facts may prompt better management practices at industrial agricultural and all levels of management from local to governmental so as to reduce the negative impacts of chemical contaminants on our planet *Ecological Entomology* Carl B. Huffaker, Andrew Paul Gutierrez, 1998-12-07 Featuring completely updated chapters additional authors and an increased emphasis on alternatives to traditional pesticides the second edition of *Ecological Entomology* is the field's leading reference on the role of insects in ecosystems The authors cover insect growth and development what they eat how they reproduce and how they move in various environments The book also examines how insects interact with the plant community and how to control insect populations naturally ,
