Critical Theory and Economics Robin Maialeh, 2023-03-23 This book expands upon a range of economic insights within the overall context of critical theory particularly with respect to the question of socioeconomic inequalities and presents an explanation of how critical theory provides a number of interesting perspectives for economists Economic agents deliberately imprisoned in their instrumental rationality as a means to survive under competitive relationships are microscopic constituents of systemic forces which exist beyond their will Despite the subjective rationality of such agents in terms of formally logical transitivity and consistency aggregate market distributional mechanisms also display non rational patterns The crucial aspect of the dynamics of this system consists of the paralysing effect of the high level of socioeconomic inequality which is driven by a permanent struggle for self preservation under competitive rules it is a reminiscence of natural uncivilised relationships that constituted the reproduction process of the whole These reified agents thus become instruments of their socially constructed powers on the one hand and objects of their existential conditionality on the other Hence the dialectical approach adopted by the author aims to uncover the way in which structurally genetic market forces govern individual behaviour as well as how individual behaviour shapes these structurally genetic forces which together form the transcending principles of unequal distribution This book will be of particular interest to scholars of the political economy philosophy and the methodology of the social sciences especially those concerned with inequality issues This book includes a preface written by Professor Martin Jay

The New Natural Resource Hans Christian Garmann Johnsen, 2016-03-03 Increasingly in the public discourse there are references to the knowledge economy knowledge society knowledge workers and knowledge organisations The argument is that knowledge is becoming the main economic resource replacing the natural resources that drove the industrial revolution The new knowledge economy is driven by knowledge development innovation and highly skilled employees Increasing investment in higher education and in universities is in line with this strategy and understanding In an earlier book *Creating Collaborative Advantage* edited with Richard Ennals Professor Hans Christian Garmann Johnsen argued that it is knowledge that links social and economic processes He believes that what is missing in the current discussion on innovation is a conceptualisation of exactly what knowledge is In *The New Natural Resource* he digs deeper into what it is and how it develops and subsequently leads to widespread change The author argues that knowledge is inherently a social phenomenon That is why social processes are closely linked to economic development and why this relationship becomes even more apparent in the new knowledge economy Knowledge is not an objective entity established once and for all Knowledge development is interrelated with values norms perceptions and interpretations We need to know what the mechanisms are by which knowledge becomes legitimate
