Economics Of The Modern Construction Sector:

The Economics of the Modern Construction Sector G. Ive, S. Gruneberg, 2000-07-31 This book will be of interest to built environment professionals and to students of the economics and management of the built environment. It shows the value of integrating ideas and data about the production of the built environment as an industrial process with theories and data about the demand for construction. The approach taken is institutional and post Keynesian and illuminates an important and distinctive sector of the economy embracing design construction and property industries. This book offers some new and important perspectives for research and teaching in construction economics and management.

The Economics of the Modern Construction Firm S. Gruneberg, Graham J. Ive, 2000-08-08 This is a book about the whole diverse range of firms that are found in the construction sector about their decision making and the economic environments in which they operate. The authors aim to provide a new and coherent perspective on these firms and the choices they have to make both for their managers and for all who have a stake in these firms and their industry. This book offers some new and important perspectives for research and teaching about construction firms.

Modern Construction Economics Gerard de Valence, 2010-11-10 Modern construction economics has a wider focus than was previously the case with stronger links to mainstream economics reflecting increasing interest in a range of theoretical issues. This book brings together the essential reviews of this trend and pushes towards the development of a comprehensive theoretical framework for construction economics.

Economics for the Modern Built Environment Les Ruddock, 2008-10-10 Construction economics needs to respond to the new emphasis on sustainable development on the medium and long term consequences of construction on the whole life cycle and on the service rendered by buildings. Its focus now extends from design and construction to the operation, maintenance, refurbishment and demolition of property. Drawing on the work of the CIB Task Group on Macroeconomics for Construction, this book discusses mesoeconomic and macroeconomic models and methodologies in construction economics and is suited to graduate students and researchers.

Construction Economics Danny Myers, 2016-09-22 Construction Economics provides students with the principles underlying the relationship between economic theory and the construction industry. Its new approach specifically examines the problems of securing sustainable construction. The new edition has been fully revised to provide an overview of the economy and construction markets since the global financial crisis. As such it examines the challenges of changing government policy, adapting to climate change, adopting BIM and reducing costs. A new introduction along with new readings, data examples, glossary items, government strategies and references revises this established core text and brings it up to the historic EU referendum. As with previous editions, it retains a tried and tested format: a clear and user-friendly style, use of a second colour for emphasis, regular summaries of key points, a glossary of construction economics, extensive use of tables and figures, extracts from Construction Management and Economics reviews of useful websites. This invaluable textbook is essential reading across a wide range of disciplines from construction.

Describing Construction Rick Best, Jim Meikle, 2022-09-16 This third book from editors Rick Best and Jim Meikle brings together and presents insights into a number of key concepts in the study of construction firms projects and the group of activities that loosely define the construction industry The value for readers comes from the collection of a variety of topics in a single volume which provide a basic understanding of the complexities of construction as more than a set of practical concerns such as labour management and materials handling Instead the focus is on analysis of the industry and its component parts from the viewpoints of construction economists and others seeking to understand the drivers and challenges that shape an area of economic activity that is a major contributor in all economies The aim of this book is to provide an overview and discussion of several aspects of what makes construction tick It is unlike other industry sectors in many ways being project based with often intense competition for work Where the first book *Measuring Construction* focused on particular areas associated with quantifying various aspects of construction activity and the second *Accounting for Construction* looked more at how we record and report on construction activity *Describing Construction* gives readers the views of experts in the field of how the construction industry is described what it makes up is it even asks the question is construction a single industry This book will change the way most readers understand the construction industry whatever that may be not from the point of view of visible on site activities but through a scientific approach to analysis and understanding of how projects firms and various sectors of the industry work and how things are changing and may continue to change in future It is essential reading for students and researchers in construction management quantity surveying architecture and engineering

Myers, 2016-09-22 *Construction Economics* provides students with the principles underlying the relationship between economic theory and the construction industry. Its new approach specifically examines the problems of securing sustainable construction. The new edition has been fully revised to provide an overview of the economy and construction markets since the global financial crisis. As such, it examines the challenges of changing government policy, adapting to climate change, adopting BIM, and reducing costs. As with previous editions, it retains a tried and tested format, a clear and user-friendly style, use of a second colour for emphasis, regular summaries of key points, a glossary of construction economics, extensive use of tables and figures, extracts from *Construction Management and Economics*, reviews of useful websites. This invaluable textbook is essential reading across a wide range of disciplines from construction management and civil engineering to architecture, property, and surveying.

Ethnographic Research in the Construction Industry Sarah Pink, Dylan Tutt, Andrew Dainty, 2013. The construction industry as a workplace is commonly seen as problematic for a number of reasons, including its worrying health and safety record, the instability of its workforce, and the poorly regulated nature of the sector. It is surprising, therefore, that the sector and its working practices remain so under-theorised. Now, though, there is a growing interest in, and awareness of, the utility of an ethnographic approach to the construction industry. *Ethnographic Research in the Construction Industry* draws together in one volume a set of expert contributions which demonstrate how social science perspectives rooted in ethnographic research on construction sites and with construction workers themselves can generate fresh insights into the social, cultural, and material ways that the industry and conditions of work in it are experienced and played out. Each chapter develops discussion on the basis of an ethnographic case study to examine how theoretically informed ethnographic research can help us understand industry problems and can challenge common perceptions of the construction industry. This book will be of interest to students and scholars of anthropology, sociology, geography, and organization studies, as well as those from the built environment and related applied fields.

Research Companion to Construction Economics Ofori, George, 2022-03-15. This innovative *Research Companion* considers the history, nature, and status of construction economics and its need for development as a field in order to be recognised as a distinct discipline. It presents a state-of-the-art review of construction economics, identifying areas for further research.

Infrastructure Investments in Developing Economies Giang Dang, Low Sui Pheng, 2014-10-18. The focus of the book is on the case of Vietnam, with lessons drawn for other developing economies. The book employs the mixed use of data to provide a stronger basis for analysis and interpretation of related government policies.

Economics for the Modern Built Environment Les Ruddock, 2008-10-10 Recent decades have seen a major social and economic changes across the developed world and consequent changes in the construction and property industries The discipline of construction economics needs to respond to this For instance the importance of sustainable development has become recognised as has the need to increasingly master the medium
