Ecotoxicology Of Wild Mammals:

Ecotoxicology of Wild Mammals Richard F. Shore, Barnett A. Rattner, 2001-04-25 This landmark book which contains contributions from the world's foremost mammalian ecotoxicologists is a truly impressive summary of research undertaken in this field in recent years. It is also the first book to draw such information together in a seamless and unified approach. In examining the exposure and effects of environmental contaminants in wild mammal populations, this book addresses four core questions: What exactly do we know about environmental contaminants in wild mammals? What are the commonalities and differences between mammal orders/species in the effects that contaminants have? How and to what degree of accuracy can we predict the adverse effects of environmental contaminants on mammalian wildlife? How significant are contaminant insults compared with other density-independent and dependent factors such as habitat loss, climatic factors, and disease? The key underlying scientific principles and issues raised by the team of international authors will have significance throughout the world, making this an invaluable book not only for all those studying the effects of environmental pollutants on mammals but also on regulatory agencies and those carrying out environmental impact assessment. **Ecotoxicology** Colin

Walker, 2014-05-07 Chemical Warfare in Nature Pesticides and other industrial chemicals are at the root of many pollution problems. In view of the toxic effects of industrial chemicals found in the water, soil, and air, *Ecotoxicology: Effects of Pollutants on the Natural Environment* considers the impact of chemicals on the environment from a wider perspective: the evolution of

Demography in Ecotoxicology Jan Kammenga, Ryszard Laskowski, 2000-12-19 Demography in Ecotoxicology focuses on the interface between toxicology, life history, and demographic theory. This comprehensive book examines the different ways of adequately assessing the potential impact of toxic stress on populations and discusses how to obtain an insight into the underlying physiological and genetic mechanisms. The theory is illustrated with empirical observations on a number of species and organisational levels, and the book incorporates case studies, real data, life history models, methodologies, and recommendations for risk assessment. Written by an international team of researchers, *Demography in Ecotoxicology* will be invaluable to ecotoxicologists, ecologists, and wildlife conservationists in academia, industry, and regulatory bodies wishing to gain a greater understanding into the prediction and effects of natural and man-made toxicants on populations. C. H. Walker, R. M. Sibly, S. P. Hopkin, D. B. Peakall, Cutting across traditional subject boundaries *Principles of Ecotoxicology* Fourth Edition gives readers an integrated view of ecotoxicology from molecules to ecosystems. This new edition of a bestselling textbook continues to emphasize principles rather than practice, providing the interdisciplinary perspective and grounding required for research. Organized into three sections, the book first describes the molecular structures, properties, and environmental fate of pollutants. It then deals with the effects of pollutants on living organisms at the molecular, cellular, and individual levels. Moving into population biology and population genetics, the third part of the book addresses a question of great interest to ecologists: What effects do pollutants have at the levels of population, community, and the whole ecosystem?

The book also looks at how ecotoxicology is used in the biomonitoring of environmental pollution the investigation of pollution problems the conducting of field trials the study of the development of resistance and the growing area of environmental risk assessments Throughout examples and case studies illustrate the principles This updated fourth edition includes new material on nanoparticle pollution bioaccumulation biomarkers and chemical warfare in nature as well as a new chapter on the future directions of ecotoxicology A concise textbook that will also appeal to practicing ecotoxicologists it provides a solid basis for understanding what happens to chemicals in the real world where they go how they ultimately degrade and how they affect the individuals and populations that encounter them What's New in This Edition Revised and updated material throughout A chapter on future directions of ecotoxicology New material on nanoparticle pollution and chemical warfare in nature Expanded coverage of bioaccumulation biomarkers and risk assessment for affected populations More case studies many from the United States Discussion of neurotoxic and behavioral effects of pollutants Recent research on the decline of vultures and effects of neonicotinoids on bees Organic Pollutants An Ecotoxicological Perspective Second Edition CRC Press 2008 a companion volume to this book covers the mechanistic aspects of ecotoxicology in more depth

Ecotoxicology of Amphibians and Reptiles Donald W. Sparling, Greg Linder, Christine A. Bishop, Sherry Krest, 2010-06-02 Building on the success of its popular predecessor the second edition of *Ecotoxicology of Amphibians and Reptiles* presents newly available findings on the species that are important environmental indicators This new edition covers nearly twice as many topics as the first including recent developments in the ecotoxicology of amphibians and reptiles

Behavioural Ecotoxicology Giacomo Dell'Omo, 2002-05-22 Behavioural ecotoxicology is an emerging field dealing with the effects of environmental pollutants on the behaviour of animals Behavioural techniques derived from experimental psychology behavioural pharmacology and neurotoxicology are applied to detect and characterise changes in animals living in the environment exposed to various pollutants Behavioural effects are then interpreted in an ecological context considering the long term relevance of these changes at both the individual and population level

Ecotoxicology Erik Jorgensen, 2010-04-16 *Ecotoxicology* offers an overview of current ecotoxicological problems It includes basic ecotoxicological concepts as well as information about chemicals and toxic substances that may cause harmful effects on the ecosystem and its living components The book with a total of 48 chapters is divided into three parts The first part includes the basic concepts of ecotoxicology starting with an introductory chapter on ecotoxicology as a subdiscipline of ecology assessment on ecotoxicological effects and risk and properties and effects of toxic chemicals These topics are further discussed throughout the book along with nomenclature focal topics and the history of ecotoxicology The two remaining parts tackle harmful properties and harmful chemicals The second part also covers bioaccumulation bioavailability biodegradability biodegradation and biomagnification It also provides models for ecotoxicological populations ecosystems and landscapes and on food web bioaccumulation Chemicals including benzene copper lead nitrogen phenols pheromones
