**Emerging Technologies in Hazardous Waste Management IV** Daniel William Tedder, American Chemical Society. Division of Industrial and Engineering Chemistry, 1994 The 18 papers were selected from over 200 presented at the symposium Atlanta Georgia September 1992 to reflect the most important or promising directions in hazardous waste management and to avoid duplicating information in earlier volumes of the series Among the remedial technologies described for soils and sediments are electrokinetic and the mobilization of specific ions Other methods include the crystallization of mechanical pulp mill effluents and the removal of gasoline vapors from air streams by biofiltration Radioactive and mixed waste are considered in studies of the Hanford waste site in Washington and reports of laboratory scale studies Annotation copyright by Book News Inc Portland OR *Emerging Technologies in Hazardous Waste Management 8* D. William Tedder, Frederick G. Pohland, 2000-05-31 Several long term trends in technology evolution have become apparent since these symposia began in 1989 Earlier presenters more frequently discussed treatment methods involving harsh and extensive human intervention As the symposia have continued the number of presentations describing extremely harsh and expensive treatment technologies have gradually been supplanted by more subtle and gentler methods Such methods include subsurface engineered barriers phytoremediation and bioremediation Nineteen manuscripts were selected for inclusion in this volume based upon peer review scientific merit the editors perceptions of lasting value or innovative features and the general applicability of either the technology itself or the scientific methods and scholarly details provided by the authors General topics include soil treatment groundwater treatment and radioactive waste treatment
