A Survey of Sustainable Development Jonathan Harris, Timothy Wise, Kevin Gallagher, Neva R. Goodwin, 2013-04-16

Perpetual economic growth is physically impossible on a planet with finite resources Many concerned with humanity's future have focused on the concept of sustainable development as an alternative as they seek means of achieving current economic and social goals without compromising the ability of future generations to meet their own goals Sustainable development brings together elements of economics public policy sociology ecology resource management and other related areas and while the term has become quite popular it is rarely defined and even less often is it understood A Survey of Sustainable Development addresses that problem by bringing together in a single volume the most important works on sustainable human and economic development It offers a broad overview of the subject and gives the reader a quick and thorough guide to this highly diffuse topic The volume offers ten sections on topics including economic and social dimensions of sustainable development the North South balance population and the demographic transition agriculture and renewable resources energy and materials use globalization and corporate responsibility local and national strategies Each

section is introduced with an essay by one of the volume editors that provides an overview of the subject and a summary of the mainstream literature followed by two to three page abstracts of the most important articles or book chapters on the topic A Survey of Sustainable Development is the sixth and final volume in the Frontier Issues of Economic Thought series produced by the Global Development And Environment Institute at Tufts University Each book brings together the most important articles and book chapters in a frontier area of economics where important new work is being done but has not yet been incorporated into the mainstream of economic study The book is an essential reference for students and scholars concerned with economics environmental studies public policy and administration international development and a broad range of related fields

Indigenous Methodologies, Research and Practices for Sustainable Development Marcellus F. Mbah, Walter Leal Filho, Sandra Ajaps, 2022-10-21 This book states that whilst academic research has long been grounded on the idea of western or scientific epistemologies this often does not capture the uniqueness of Indigenous contexts and particularly as it relates to the achievement of the United Nations Sustainable Development Goals SDGs The SDGs were announced in 2015 accompanied by 17 goals and 169 targets These goals are the means through which Agenda 2030 for sustainable development is to be pursued and realised over the next 15 years and the contributions of Indigenous peoples are essential to achieving these goals Indigenous peoples can be found in practically every region of the world living on ancestral homelands in major cities rainforests mountain regions desert plains the arctic and small Pacific Islands Their languages knowledges and values are rooted in the landscapes and natural resources within their territories However many Indigenous peoples are now minorities within their homelands and globally and there is a dearth of research based on Indigenous epistemologies and methodologies Furthermore academic research on Indigenous peoples is typically based on western lenses Thus the paucity of Indigenous methodologies within mainstream research discourses present challenges for implementing practical research designs and interpretations that can address epistemological distinctiveness within Indigenous communities There is therefore the need to articulate as well as bring to

the nexus of research aimed at fostering sustainable development a decolonising perspective in research design and practice This is what this book wants to achieve The contributions critically reflect on Indigenous approaches to research design and implementation towards achieving the sustainable development goals as well as the associated challenges and opportunities The contributions also advanced knowledge theory and practice of Indigenous methodologies for sustainable development
