En El Suelo:

El transporte del oxígeno en el suelo. Relaciones agrofísicas básicas Franco Humberto Obando Moncayo, 2002 Con este libro se aspira llenar un vacío en el medio académico y científico cual es la carencia eternizada de un modelo conceptual de la aireación del suelo que permita el entendimiento y la interpretación biofísica de los impactos de actividades agrícolas como el riego, el drenaje y la labranza en el intercambio gaseoso y el crecimiento de las plantas. El libro establece un buen comienzo en el sentido que sugiere el uso de indicadores de estrés de oxígeno basados en el concepto dinámico de la aireación del suelo entendida como un proceso de intercambio de gases regulado por factores físicos, químicos y biológicos. Se hace referencia específica al transporte del oxígeno por difusión dado que es el proceso que gobierna la aireación en el suelo con relación al crecimiento de las plantas y la producción de cultivos. La presente obra intenta constituirse en una fuente de información básica para especialistas de diferentes ramas de las ciencias ambientales. El punto de convergencia es el suelo como medio poroso que cumple múltiples funciones en los ecosistemas y agroecosistemas entre ellas el intercambio gaseoso entre la rizosfera y la atmósfera.
