an evolutionary model of technological change with network effects can explain not only commonly observed asymmetric industry structures monopolies and oligopolies but also growth cycles The book includes a comprehensive account of the most influential economic growth theories a discussion of the research on network effects as well as an introduction to the methodology the model and a case study on the recent emergence of information and communication technology This important new volume will be relevant to all those interested in theoretical economics growth theory innovation economics agent based modelling and industry dynamics

Innovation Commons Jason Potts, 2019 Innovation is among the most important topics in understanding economic sustained economic growth Jason Potts argues that the initial stages of innovation require cooperation under uncertainty and draws from insights on the solving of commons problems to shed light on policies and conditions conducive to the creation of new firms and industries The problems of innovation commons are overcome Potts shows when there are governance institutions that incentivize cooperation thereby facilitating the pooling of distributed information knowledge and other inputs The entrepreneurial discovery of an economic opportunity is thus an emergent institution resulting from the formation of a cooperative group under conditions of extreme uncertainty working toward the mutual purpose of opportunity discovery about a nascent technology or new idea Among the problems commons address are those of the identity cooperation consent monitoring punishment and independence A commons is efficient compared to the creation of alternative economic institutions that involve extensive contracting and networks private property rights and price signals or public goods i.e. firms markets and governments In other words the origin of innovation is not entrepreneurial action per se but the creation of a common pool resource from which entrepreneurs can discover opportunities Potts framework draws on the evolutionary theory of cooperation and institutional theory of the commons It also has important implications for understanding the origin of firms and industries and for the design of innovation policy Beginning with a discussion of problems of knowledge and coordination as well as their implications for common pool environments the book then explores instances of innovation commons and the lifecycle of innovation including increased institutionalization and rigidity Potts also discusses the possible implications of the commons framework for policies to sustain innovation dynamics

International Agreements between Non-State Actors as a Source of International Law Melissa Loja, 2022-09-22 This book examines whether international agreements between non state actors can be identified as a source of international law using objective criteria It asks whether beyond Article 38 of the Statute of the International Court of Justice there is a system of rules processes beliefs or semantics by which these agreements can be objectively identified as a source of international law Departing from the more usual state centric analysis it adopts postmodern legal positivism as its analytical tool This allows for the reality that international law making takes place in subjective social landscapes To test the effectiveness of this approach it is applied to agreements between petroleum agencies and corporations which allow two or more states to exploit disputed resources across boundaries looking in particular at

arrangements involving China Vietnam and the Philippines By so doing it illustrates an alternative way that states can manage disputes without having to resort to conflict It will appeal to both scholars and practitioners of public international law as well as civil servants Choice ,2009 **The SAGE Handbook of Intellectual Property** Matthew David,Debora Halbert,2014-11-18 This Handbook brings together scholars from around the world in addressing the global significance of controversies over and alternatives to intellectual property IP today It brings together over fifty of the leading authors in this field across the spectrum of academic disciplines from law economics geography sociology politics and anthropology This volume addresses the full spectrum of IP issues including copyright patent trademarks and trade secrets as well as parallel rights and novel applications In addition to addressing the role of IP in an increasingly information based and globalized economy and culture it also challenges the utility and viability of IP today and addresses a range of alternative futures

Special Features of the UN Model Convention Anna Binder,Viktoria Wöhrer,2019-10-01 Detailed research on the UN Model Convention s unique features The UN Model Convention has a significant influence on international tax treaty practice and is especially used by emerging and developing countries as a starting point for treaty negotiations Driven by the aim to achieve consistency in the international tax treaty practice the structure and content is to a large extent similar in the UN Model and the OECD Model However whereas the OECD has historically focused its efforts on issues mainly relevant for developed countries the UN Tax Committee has continuously attempted to specifically take into account tax treaty policies for developing countries when drafting and amending the UN Model Convention Compared to the OECD Model Convention the UN Model Convention aims at giving more weight to the source principle Popular examples are the PE definition in the UN Model which provides for a lower threshold than Article 5 of the OECD Model or Article 12A on Fees for Technical Services which has been introduced with the latest amendment of the UN Model Convention 2017 and allows for a withholding tax to be levied on payments to non residents when the payer of the fee is a resident of that contracting State irrespective of where the services are provided Interestingly in the discussions of the tax challenges arising from the digitalization of the economy the OECD and the G20 are also exploring options to allocate more taxing rights to the jurisdiction of the customer and or user i e the market jurisdictions As this has traditionally been the focus of the UN Model Convention its unique features and developing countries practices could be taken into account when exploring new nexus rules that are not constrained by the physical presence requirement This book contains the master s theses of the full time LL M program 2018 2019 for which *Special Features of the UN Model Convention* has been chosen as the general topic With this book the authors and editors do not aim at discussing each article of the UN Model Convention but rather focus on the unique features of the UN Model Convention which are explored in detail This is supplemented with an evaluation of the

function and relevance of the UN Tax Committee in the international tax policy discussion and with an analysis of the influences of the OECD's BEPS project on the UN Model Eco-finance Paul A. U. Ali, Kanako Yano, 2004-01-01 Market based environmental instruments are the most creative of the many initiatives devised to combat air and water pollution and promote biodiversity Among these none has attracted more attention than the burgeoning trade in environmental allowances and credits Originally developed in the United States around 1990 these varieties of tradable instruments were globally validated by the Kyoto Protocol of 1997 which explicitly contemplates the buying and selling of environmental allowances and credits among both sovereign states and corporate entities Despite U S opposition to the Kyoto Protocol global trading in pollution instruments is growing at an exponential rate with instruments representing over 70 million tonnes of greenhouse gas emissions estimated to have been traded in 2003 Eco Finance is the first in depth legal analysis of this extraordinary hybrid of environmental regulation and global financial markets It deals with what are currently the two dominant types of market based environmental instruments market traded environmental instruments which include the tradable pollution allowances envisaged by the Kyoto Protocol and environmental financing instruments which include the emerging class of environmental and socially responsible investment funds Among the numerous topics and issues treated by Ali and Yano are the following the cap and trade regime debt for environment swaps forestry securitisations greenhouse gas emissions markets carbon funds and swaps tradable green certificates weather derivatives duty to hedge climatic risks catastrophe bonds protected cell companies the prudent investor rule and ethical security indices The authors deal searchingly with the critical legal issues that arise in connection with these market based environmental instruments such as the danger that courts might recharacterise underlying risk transfer agreements as illegal insurance products For this reason and for its wealth of practical theoretical and informational detail Eco Finance will be of enormous value to a broad range of legal governmental and business professionals including environmental regulators securities regulators financial market professionals institutional and other fiduciary investors corporate risk managers and investment fund managers as well as practitioners and academics in both environmental law and financial law
