The Effectiveness of Policy Instruments for Energy-Efficiency Improvement in Firms Kornelis Blok,2004-05-31
How can governments stimulate energy efficiency improvement This book analyzes environmental policy in the Netherlands to present a wealth of empirical results on the successes and failures of governmental initiatives in environmental policy Discussion extends to such topics as free rider effects of subsidies the credibility of voluntary agreements the art of regulation and the fate of research development money

The Effectiveness of Policy Instruments for Energy-Efficiency Improvement in Firms Kornelis Blok, Henri L.F. de Groot, Esther E.M. Luiten, Martijn G.

Rietbergen,2004-03-31 Improvement of energy efficiency is one of the important options for reducing greenhouse gas emissions According to the Third Assessment Report of the Intergovernmental Panel on Climate Change hundreds of technologies for improving the end use energy efficiency make up more than half of the global potential for greenhouse gas emission reduction in the short and medium term 2010 2020 IPCC 2001 see also WEA 2000 An important next question is how these options can actually be deployed More specifically one may ask what role governments can play by using policy instruments to promote the deployment of energy efficient technologies In this introductory Chapter we will first set out the aim of the research described in this book Then we will discuss the various policy instruments that may play a role in energy efficiency improvement Next the various aspects important for characterising policy instruments will be discussed and the various disciplinary approaches are listed Finally the outline of the complete book will be given

EIB Working Papers 2019/06 - Promoting energy audits: Results from an experiment European Investment Bank,2019-10-15 Energy audits are key to increase investments in energy efficiency This paper assesses the effectiveness of policy interventions in promoting energy audits by relying on evidence from a unique experiment The findings of the experiment allow us to quantify by how much the probability that firms invest in energy audits increases as the policy mix changes

Introduction to Energy Analysis Kornelis Blok, Evert Nieuwlaar,2016-08-25 The energy supply and demand system is of great importance for society from economic social and ecological viewpoints The last decade in particular has seen rapid changes in the world of energy systems and it is therefore now an important area for study academic research and professional work This textbook provides an introduction to energy analysis for those students who want to specialise in this challenging field In comparison to other textbooks this book provides a balanced treatment of complete energy systems covering the demand side the supply side and the energy markets that connect these The emphasis is very much on presenting a range of tools and methodologies that will help students find their way in analysing real world problems in energy systems Featuring learning objectives further readings and practical exercises in each chapter An

Introduction to Energy Analysis will be essential reading for upper level undergraduate and postgraduate students with a background in the natural sciences and engineering This book may also be useful for professionals dealing with energy issues as a first introduction into the field

Improving Energy Efficiency Through Technology R. J. G. M. Florax, H. L. F. De Groot, Peter Mulder, 2011 Increasing energy efficiency is important because it offers the prospect of partly solving our climate change and energy security problems without pain This book sheds further light on the issue focusing on energy extensive economic activities which by sheer volume collectively use a substantial amount of energy That simple fact alone makes this book worthwhile but there are many other gems Richard Tol the Economic and Social Research Institute ESRI Ireland This innovative book explores the adoption of energy saving technologies and their impact on energy efficiency improvements It contains a mix of theoretical and empirical contributions and combines and compares economic and physical indicators to monitor and analyse trends in energy efficiency The authors pay considerable attention to empirical research on the determinants of energy saving investment including uncertainty energy price volatility and subsidies They also discuss the role of energy modelling in policy design and the potential effect of energy policies on technology diffusion in energy extensive sectors Written from a multi disciplinary perspective this book will appeal to academics and graduates in the areas of energy saving technologies energy economics and natural resource economics as well as policy makers particularly those in energy policy

Green Keynesianism and the Global Financial Crisis Kyla Tienhaara, 2018-04-17 It is widely accepted that limiting climate change to 2 C will require substantial and sustained investments in low carbon technologies and infrastructure However the dominance of market fundamentalism in economic thinking for the past three decades has meant that governments have generally viewed large spending programs as politically undesirable In this context the Global Financial Crisis GFC represented a huge opportunity for proponents of public investment in environmental projects or Green Keynesianism This book examines the experience of Australia Canada Japan Korea and the United States with Green Keynesian stimulus programs in the wake of the GFC Unfortunately on the whole the cases do not provide much optimism for proponents of Green Keynesianism Much less funding than was originally allocated to green programs was actually spent in areas that would produce an environmental benefit Furthermore a number of projects had negligible or even detrimental environmental outcomes While the book also documents several success stories the research indicates overall that more careful consideration of the design of green stimulus programs is needed In addition to concrete policy advice the book provides a broader vision for how governments could use Keynesian policies to work toward creating an ecological state This book will be of great interest to students and scholars of environmental politics environmental economics political economy and sustainable development

Governance for Sustainable Development William M. Lafferty, 2006-01-01 This book is an original study of the challenge of implementing sustainable development in Western democracies It highlights the obstacles which sustainable development presents for strategic governance and critically examines how these problems can best be

overcome in a variety of different political contexts *The Social and Behavioural Aspects of Climate Change* Pim Martens, Chiung Ting Chang, 2017-09-08 Over the past few years and certainly since the publication of the Stern Report there has been increasing recognition that climate change is not only an environmental crisis but one with important social and economic dimensions There is now a growing need for multi disciplinary research and for the science of climate change to be usefully translated for policy makers Until very recently scientific and policy emphasis on climate change has focused almost exclusively on mitigation efforts mechanisms and regulations to reduce greenhouse gas emissions The success of such efforts to date is debatable In fact the impact of ever more stringent emission control programmes could potentially have enormous social consequences Little effort has been expended on the exploration of a systematic evaluation of climate stabilization benefits or the costs of adapting to a changed climate let alone attempting to integrate different approaches There is an increasing recognition that the key actors in the climate crisis also need to be preparing for change that is unavoidable This has resulted in a greater consideration of vulnerability and adaptation The book based on the research programme Vulnerability Adaptation and Mitigation VAM which ran from 2004 to 2010 funded by the Netherlands Organisation for Scientific Research NWO presents a cluster of case studies of industries communities and institutions which each show how vulnerability adaptation and mitigation analyses can be integrated using social behavioural sciences Each chapter makes specific recommendations for the studied industry sector community or institution analyses the latest research developments of the field and identifies priorities for future research The book argues that the inherent complexity of climate change will ultimately require a much more integrated response both scientifically to better understand multiple causes and impacts as well as at the scientific policy interface where new forms of engagement between scientists policy makers and wider stakeholder groups can make a valuable contribution to more informed climate policy and practice The book is particularly timely as the scientific research and policy debate is shifting from one of problem framing to new agendas that are much more concerned with implementation the improvement of assessment methodologies from a multi disciplinary perspective and the reframing of current scientific understanding towards mitigation adaptation and vulnerability A critical element in responding to the climate change challenge will be to ensure the translation of these new scientific insights into innovative policy and practice on the ground This book provides some fundamental elements to answer this need *The Social and Behavioural Aspects of Climate Change Linking Vulnerability Adaptation and Mitigation* will be essential reading for social science researchers and policy managers in the area of climate change as well as for those who want to know what the social and behavioural sciences can contribute toward coping with climate hazards NGOs law firms and businesses in the energy sector or other climate related fields will also find the book of great value [Energy Efficiency Financing and Market-Based Instruments](#) Yang Liu, Farhad Taghizadeh-Hesary, Naoyuki Yoshino, 2021-09-21 This book is devoted to investigating the policy design and effectiveness of financial and market based instruments to promote energy efficiency financing The

concept of this monograph is to present the latest results related to energy efficiency funding schemes energy efficiency obligations voluntary agreements auction mechanisms and Super Energy Services Companies Super ESCOs in major jurisdictions across the world The book focuses on financial and market based instruments as they deliver a price signal which provides an incentive for firms to invest in innovation or implement more energy efficient technologies and deliver energy savings while minimizing costs Such instruments can have significant advantages for the government supporting the fiscal sustainability of the government s energy efficiency efforts requiring less enforcement than regulation and according the market flexibility to select the most cost efficient technologies This book is highly recommended to researchers policy experts and business specialists who seek an in depth and up to date integrated overview of energy efficiency financing

EIB Investment Report 2019/2020 European Investment Bank,2019-11-26 The Investment Report issued annually by the European Investment Bank provides a comprehensive overview and analysis of investment and the financing of investment in the European Union It combines the exploration of investment trends with in depth analysis focusing especially on the drivers and barriers to investment activity The report leverages on a unique set of databases and survey data including EIBIS an annual survey of 13 500 firms in Europe which focuses on their assessment of investment and investment finance conditions and which allows analysis with firm balance sheet information The report provides critical inputs to policy debates on the need for public action on investment and on the types of intervention that can have the greatest impact

Environmentally Sustainable Buildings Challenges and Policies OECD,2003-04-07 This book presents an analysis of the environmental impacts of the building sector and of current policies to mitigate these impacts in particular with regard to reduction of CO2 emission minimisation of construction and demolition waste and prevention of indoor air pollution

Harnessing Renewable Energy in Electric Power Systems Boaz Moselle,Jorge Padilla,Richard Schmalensee,2010-09-23 Reflecting its reliance on fossil fuels the electric power industry produces the majority of the world s greenhouse gas emissions The need for a revolution in the industry becomes further apparent given that decarbonization means an increasing electrification of other sectors of the economy in particular through a switch from gasoline to electric vehicles Of the options for producing electric power without significant greenhouse gas emissions renewable energy is most attractive to policymakers as it promises increased national self reliance on energy supplies and the creation of new industries and jobs without the safety and political concerns of nuclear power or the unproven technology of carbon capture and storage Drawing on both economic theory and the experiences of the United States and EU member states *Harnessing Renewable Energy* addresses the key questions surrounding renewable energy policies How appropriate is the focus on renewable power as a primary tool for reducing greenhouse gas emissions If renewable energy is given specific support what form should that support take What are the implications for power markets if renewable generation is widely adopted Thorough and well evidenced this book will be of interest to a broad range of policymakers the electric power industry and economists

who study energy and environmental issues *R&D Investment and Impact in the Global Construction Industry* Keith Hampson, Judy A. Kraatz, Adriana X. Sanchez, 2014-06-20 R and how industry and researchers can manage their efforts to improve productivity whilst addressing the environmental and social needs of their communities Case studies present projects where R D ideas funded by both the private and public sectors have been translated from research into practice or policy and examine drivers successes and barriers to the delivery of R D in industry Based on research from members of the CIB Task Group 85 R D Investment and Impact and concluding with key insights for maximising the impact of R D in the future the book holds valuable lessons for practitioners policy makers and researchers across the international construction industry

Building a Low-carbon Economy Great Britain. Committee on Climate Change, 2008 Climate change resulting from CO₂ and other greenhouse gas emissions poses a huge threat to human welfare To contain that threat the world needs to cut emissions by about 50 per cent by 2050 and to start cutting emissions now A global agreement to take action is vital A fair global deal will require the UK to cut emissions by at least 80 per cent below 1990 levels by 2050 In this report the Committee on Climate Change explains why the UK should aim for an 80 per cent reduction by 2050 and how that is attainable and then recommends the first three budgets that will define the path to 2022 But the path is attainable at manageable cost and following it is essential if the UK is to play its fair part in avoiding the far higher costs of harmful climate change Part 1 of the report addresses the 2050 target The 80 per cent target should apply to the sum of all sectors of the UK economy including international aviation and shipping The costs to the UK from this level of emissions reduction can be made affordable estimated at between 1.2 per cent of GDP in 2050 In part 2 the Committee sets out the first three carbon budgets covering the period 2008-22 and examines the feasible reductions possible in various sectors decarbonising the power sector energy use in buildings and industry reducing domestic transport emissions reducing emissions of non CO₂ greenhouse gases economy wide emissions reductions to meet budgets The third part of the report examines wider economic and social impacts from budgets including competitiveness fuel poverty security of supply and differences in circumstances between the regions of the UK

Global Energy Assessment Thomas B. Johansson, Anand Prabhakar Patwardhan, Nebojša Nakićenović, Luis Gomez-Echeverri, 2012-08-27 Independent scientifically based integrated policy relevant analysis of current and emerging energy issues for specialists and policymakers in academia industry government

Reducing carbon emissions from UK business Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-03-10 The Climate Change Levy package is the second biggest element in the UK Climate Change Programme and savings appear to have been significant but were strongly front end loaded and have eased off since soon after its introduction The Levy will reduce annual UK CO₂ emissions by 12.8 million tonnes by 2010 But these savings have come mainly from the effect its announcement had on raising awareness of the potential for energy savings and most of these savings were the result of actions taken before the tax actually came into operation The Levy itself has had relatively little effect on business emissions

especially in the case of SMEs and large but non energy intensive organisations The Government believes that Climate Change Agreements CCAs will reduce annual CO2 emissions by an additional 7 million tonnes by 2010 Complying with CCAs has galvanised business interest in finding energy savings and that key to this has been the incentive of the tax discount they offer The exemptions on the Climate Change Levy for green electricity and combined heat and power have had minimal effect on the construction of new renewables and CHP capacity essentially because they are worth too little money The CCL package does not impose a damaging economic burden on UK business overall and is encouraging greater resource productivity and stimulating energy efficient industries The CCL has not worked quite as expected Instead of rationally seeking to reduce their costs through increased energy efficiency businesses appear to have needed an extra stimulus to change their approach to energy use This has profound implications for climate change policy more widely If even large companies require additional policies to drive behavioural change this must be all the more true for small businesses public bodies and private households

Climate Change 2007 - Mitigation of Climate Change Intergovernmental Panel on Climate Change, 2007-11-12 The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provide the most comprehensive and balanced assessment of climate change available This IPCC Working Group III volume provides a comprehensive state of the art and worldwide overview of scientific knowledge related to the mitigation of climate change It includes a detailed assessment of costs and potentials of mitigation technologies and practices implementation barriers and policy options for the sectors energy supply transport buildings industry agriculture forestry and waste management It links sustainable development policies with climate change practices This volume will again be the standard reference for all those concerned with climate change including students and researchers analysts and decision makers in governments and the private sector

Political Economy of the Environment Simon Dietz, Jonathan Michie, Christine Oughton, 2011-02-01 This book is the culmination of several years work by a group of academics policy makers and other professionals looking to understand how alternative economic thinking and indeed thinking from quite different social scientific disciplines could enhance the mainstream economic approach to environmental and natural resource problems Of the editors Dietz comes from the mainstream economics tradition while Michie and Oughton draw explicitly on institutional and evolutionary economics The various authors represent a range of disciplinary backgrounds and approaches This book draws on the strengths of each and all of these approaches to analyse environmental issues and what can be done to tackle these through corporate and public policy The book argues that the need for an inter disciplinary approach Two themes which emerge repeatedly throughout the book are the need for an interdisciplinary theory of technological change and the need for a similarly interdisciplinary approach to the study of human behaviour and how it influences both production and consumption choices The two themes are of course related Resolving environmental questions requires an understanding of their nature of their causes and to the extent that they are anthropogenic of how to

change human behaviour These fundamental issues are the focus of the four chapters that form Part 1 of this volume The remainder of the volume develops them in more detail Making Profits, Protecting Our Planet ,2005 This book i identifies a range of market and social forces driving the private sector toward more responsible environmental stewardship ii shows the need for governments the private sector and communities to adjust their relations iii and argues for enhanced enforcement of environmental regulations by governments even as they reach out to the private sector for stronger collaboration in environmental protection
