Fourth South American Workshop on String Processing (WSP 1997) Ricardo Baeza-Yates, 1997-10-15 We use string processing to denote any use of computers to process and manage strings or sequences of symbols This includes text retrieval compression computational biology natural language processing word theory etc Strings can also be extended to other dimensions including images and complex objects such as trees or graphs These areas are important for many applications including text image or genetic databases Nowadays the

most important motivation for research is searching and managing the World Wide Web The Web contains terabytes of data and searching for information is becoming as difficult as finding a needle in a haystack Future versions of this work shop will focus on generic information retrieval query languages user interfaces and visualization tools **Fundamental**

Approaches to Software Engineering Ralf-Detlef Kutsche, Herbert Weber, 2003-08-01 ETAPS 2002 was the fth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised 5 conferences FOSSACS FASE ESOP CC TACAS 13 satellite workshops ACL2 AGT CMCS COCV DCC INT LDTA SC SFEDL SLAP SPIN TPTS and VISS 8 invited lectures not including those specific to the satellite events and several tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive **Graph Transformation** Andrea

Corradini, Hartmut Ehrig, Hans-Jörg Kreowski, Grzegorz Rozenberg, 2003-06-30 ICGT 2002 was the first International Conference on Graph Transformation following a series of six international workshops on graph grammars with applications in computer science held in Bad Honnef 1978 Osnabrück 1982 Warrenton 1986 Bremen 1990 Williamsburg 1994 and Paderborn 1998 ICGT 2002 was held in Barcelona Spain October 7-12 2002 under the auspices of the European Association of Theoretical Computer Science EATCS the European Association of Software Science and Technology EASST and the IFIP Working Group 1.3 Foundations of Systems Specification The scope of the conference concerned graphical structures of various kinds like graphs diagrams visual sentences and others that are useful to describe complex structures and systems in a direct and intuitive way These structures are often augmented by formalisms which add to the static description a further dimension allowing for the modeling of the evolution of systems via all kinds of transformations of such graphical structures The field of Graph Transformation is concerned with the theory applications and implementation issues of such formalisms The theory is strongly related to areas such as graph theory and graph algorithms formal language and parsing theory the theory of concurrent and distributed systems formal specification and verification logic and semantics *Graph Transformation* Rachid

Secure Data Provenance and Inference Control with Semantic Web Bhavani Thuraisingham, Tyrone Cadenhead, Murat Kantarcioglu, Vaibhav Khadilkar, 2014-08-01 With an ever increasing amount of information on the web it is critical to understand the pedigree quality and accuracy of your data Using provenance you can ascertain the quality of data based on its ancestral data and derivations track back to sources of errors allow automatic re-enactment of derivations to update data and provide attribution of the data source Secure Data Provenance and Inference Control with Semantic Web supplies step by step instructions on how to secure the provenance of your data to make sure it is safe from inference attacks It details the design and implementation of a policy engine for provenance of data and presents case studies that illustrate solutions in a typical distributed health care system for hospitals Although the case studies describe solutions in the health care domain you can easily apply the methods presented in the book to a range of other domains The book describes the design and implementation of a policy engine for provenance and demonstrates the use of Semantic Web technologies and cloud computing technologies to enhance the scalability of solutions It covers Semantic Web technologies for the representation and reasoning of the provenance of the data and provides a unifying framework for securing provenance that can help to address the various criteria of your information systems Illustrating key concepts and practical techniques the book considers cloud computing technologies that can enhance the scalability of solutions After reading this book you will be better prepared to keep up with the on going development of the prototypes products tools and standards for secure data management secure Semantic Web secure web services and secure cloud computing

Conditional and Typed Rewriting Systems Stephane Kaplan, 1991-08-07 In recent years extensions of rewriting techniques that go beyond the traditional untyped algebraic rewriting framework have been investigated and developed Among these extensions conditional and typed systems are particularly important as are higher order systems graph rewriting systems etc The international CTRS Conditional and Typed Rewriting Systems workshops are intended to offer a forum for researchers on such extensions of rewriting techniques This volume presents the proceedings of the second CTRS workshop which contributed to discussion and evaluation of new directions of research The proceedings of the first CTRS workshop are in Lecture Notes in Computer Science Vol 308 Several important directions for extensions of rewriting

techniques were stressed which are reflected in the organization of the chapters in this volume Theory of conditional and Horn clause systems Infinite terms non terminating systems and termination Extension of Knuth Bendix completion Combined systems combined languages and modularity Architecture compilers and parallel computation Basic frameworks for typed and order sorted systems Extension of unification and narrowing techniques Intelligent Techniques for Planning Ioannis Vlahavas,Dimitris Vrakas,2005-01-01 The Intelligent Techniques for Planning presents a number of modern approaches to the area of automated planning These approaches combine methods from classical planning such as the construction of graphs and the use of domain independent heuristics with techniques from other areas of artificial intelligence This book discusses in detail a number of state of the art planning systems that utilize constraint satisfaction techniques in order to deal with time and resources machine learning in order to utilize experience drawn from past runs methods from knowledge systems for more expressive representation of knowledge and ideas from other areas such as Intelligent Agents Apart from the thorough analysis and implementation details each chapter of the book also provides extensive background information about its subject and presents and comments on similar approaches done in the past
