Energy Use Efficiency Almas Heshmati,2021-04-14 Energy is one of the most important factors of production Its efficient use is crucial for ensuring production and environmental quality Unlike normal goods with supply management energy is demand managed Efficient energy use or energy efficiency aims to reduce the amount of energy required to provide products and services Energy use efficiency can be achieved in situations such as housing offices industrial production transport and agriculture as well as in public lighting and services The use of energy can be reduced by using technology that is energy saving This Special Issue is a collection of research on energy use efficiency

**Promotion of Efficient Use of Energy**

Harry Misuriello,2006 The Department of Energy funded the Alliance to Save Energy to promote the efficient use of energy under a multiyear cooperative agreement This funding allowed the Alliance to be innovative and flexible in its program development and to initiate and enhance projects it would otherwise not have been able to pursue The program period was 1999 through 2004 The mission of the Alliance to Save Energy is to promote energy efficiency domestically and worldwide The Alliance followed this mission by working closely with consumers government policy makers and energy efficient product

and service providers The projects that were initiated by the Alliance included communication and consumer education policy analysis and research the promotion of interaction among the energy efficiency industry and international energy efficiency programs The funding from the Department of Energy allowed the Alliance to study new issues in energy efficiency draw public attention to those issues and create targeted programs such as the Efficient Windows Collaborative or the Green Schools program which now function on their own to promote energy efficiency in important areas *Energy Saving in Industry by Efficient Use of Electricity* G. **Comparison of energy efficient and green buildings** Shrestha, Shritu, 2016-04-18 The adverse environmental impacts from inefficient building construction increase if measures to reduce energy and resource use through stringent building policies and efficient technology are not implemented in developed and developing countries To illustrate a holistic approach to reducing buildings energy and resources the comparison of energy efficient and green buildings in terms of their technological aspects and their policy context in developed and developing countries mainly in Europe the USA and India is presented together with a policy package recommendation for Nepal A quality review of multiple literature sources supported by various expert opinions were

the methods used for this in depth analysis It discusses that mandatory building standards voluntary labels information instruments and financial incentives are the most effective combination for the shift towards market transformation that results in a higher share of energy efficient and green buildings The lesson such as higher compliance with and enforcement of building energy standards can be seen in developed countries e g Germany Looking at a building s life cycle perspective it is not sufficient to focus solely on operational energy reduction in higher energy efficient buildings as this is achieved by the increased use of energy intensive materials Green requirements must be considered in updating building energy standards and labels particularly for developed countries Green building certification will also become more effective when the stringency of energy standards is higher and when the whole building life cycle assessment is considered Due to the increasing scarcity of energy and resources many developing countries are forced to face up to the need for holistic green buildings Although baseline standards are not as high as in most developed countries and national financial support is low the gradual move towards making the standards more stringent and incorporating the wider scope of resource saving are positive developments in developing countries e g India However to achieve significant success strategies must include the establishment of a suitable funding environment a political commitment and a strong government vision for long term and sustainable building construction The challenges faced by Nepal are even greater due to the fast pace of urban growth and the absence of energy and resource efficient buildings policies highlighting the need for an effective policy package Overall this dissertation demonstrates how energy efficient and green buildings are interlinked Green buildings reinforced with higher levels of energy efficiency and energy efficient buildings incorporating green requirements are stepping stones for achieving greater building energy and resource efficiencies And a suitable policy package fosters its development
