Real Prospects for Energy Efficiency in the United States National Research Council, National Academy of Engineering, National Academy of Sciences, America's Energy Future Panel on Energy Efficiency Technologies, 2010-07-10 America's economy and lifestyles have been shaped by the low prices and availability of energy. In the last decade however the prices of oil, natural gas and coal have increased dramatically leaving consumers and the industrial and service sectors looking for ways to reduce energy use. To achieve greater energy efficiency we need technology, more informed consumers and producers and investments in more energy efficient industrial processes, businesses, residences and transportation. As part of the America's Energy Future project, *Real Prospects for Energy Efficiency in the United States* examines the potential for reducing energy demand through improving efficiency by using existing technologies, technologies developed but not yet utilized widely and prospective technologies. The book evaluates technologies based on their estimated times to initial commercial deployment and provides an analysis of costs, barriers and research needs. This quantitative characterization of technologies will guide policy makers toward planning the future of energy use in America. This book will also have much to offer to industry leaders, investors, environmentalists and others looking for a practical diagnosis of energy efficiency possibilities.

The Efficient Use of Energy I.G.C. Dryden, 2013-10-22 The *Efficient Use of Energy* Second Edition is a compendium of papers discussing the efficiency with which energy is used in industry. The collection covers relevant topics in energy handling and describes the more important features of plant and equipment. The book is organized into six parts. Part I presents the various methods of heat production. The second part discusses the use of heat in industry and includes topics in furnace design, industrial heating, boiler plants and water treatment. Part III deals with the production of mechanical and electrical energy. It tackles the principles of internal combustion engines, generators and the use of nuclear energy. Total energy systems and heat salvage are covered in Part IV. Part V elucidates on the use of refractory and insulating materials and the importance of instrumentation and control in the regulation of energy consumption. The final section focuses on the environmental aspect of energy production such as the control of pollutants emanating from plants during production. The book will be of use to engineers and plant production managers.

Energy Efficiency Gary Stuggins, Alexander Sharabaroff, Yadviga Semikolenova, 2013-01-15 Energy efficiency is an important factor in an economy since it helps meet energy needs decrease costs and lower environmental impacts A review of the evolution of energy intensity in European and Former Soviet Union countries indicates a positive trend high energy intensity countries have now reached the level of medium energy intensity economies 15 years earlier and in the same period medium energy intensity ones had similarly evolved to levels of low energy intensity At the same time the fast transitioning economies of Central Europe converged towards similar levels of energy intensities in line with EU Directives while successful EU 15 countries managed to maintain

economic growth while keeping energy use flat This report looks at how countries effect the transition from high to medium to low energy intensity exploring whether leapfrogging is possible it s not and what policies can be particularly helpful Some of the lessons include energy prices tend to evolve from subsidized levels to full cost recovery to full cost recovery plus environmental externalities industrial energy efficiency is often the starting point with privatization and competition driving companies to reduce production costs including energy successful countries excell at governance setting targets building institutional capacity creating and improving the legal and regulatory framework and monitoring and evaluating households tended to be the last and most difficult area of reform starting with pricing improvements outreach campaigns financing programs and building certificates programs **CRC Handbook of Energy Efficiency** Frank Kreith,Ronald E.
