Ehc 209 flame Retardants Trischlorophyl Phosphate Tris2chlorophy:

Flame Retardants World Health Organization, International Program on Chemical Safety, 1998 This book evaluates the risks to human health and the environment posed by exposure to three flame retardants tris 1 chloro 2 propyl phosphate TCPP tris 1 3 dichloro 2 propyl phosphate TDCPP and tris 2 chloroethyl phosphate TCEP In view of their many similarities TCPP and TDCPP are covered together Data on all three flame retardants are extremely limited and largely confined to studies of environmental levels and adverse effects detected in experimental animals and in vitro test systems The monograph on TCPP and TDCPP describes manufacturing processes and summarizes current uses The vast majority of TCPP is used in rigid polyurethane foams with main applications in insulation for buildings and in refrigerator casings TDCPP is likewise added as a flame retardant to polyurethane foam and has some additional applications as a flame retardant for non woven fabrics For both chemicals studies show that residues are found infrequently and at low concentrations in food items For TCPP traces have been detected in industrial and domestic effluents but not in surface water or drinking water Traces of TDCPP have been detected in sewage effluent river water seawater drinking water and water sediment and in fish In view of the low volatility of both chemicals the report concludes that human exposure from these sources will be very low and will not present an acute health hazard for the general population Likewise no adverse effects on the environment are anticipated from the use of either of these flame retardants Experimental studies of TCPP in laboratory animals demonstrate low to moderate toxicity by the oral dermal and inhalation routes Tests indicate that the chemical is neither a skin nor an eye irritant No studies were available to evaluate reproductive toxicity immunotoxicity or carcinogenic potential In vitro and in vivo mutagenicity studies produced negative results Toxicity studies of TDCPP show low to moderate acute toxicity by the oral route and low acute toxicity by the dermal route The report found no evidence of teratogenicity or mutagenicity A single carcinogenicity study found an increased occurrence of several tumours at all exposure levels tested in both male and female rats In the absence of data on the mechanisms of carcinogenic action the relevance of these findings to humans could not be assessed The limited studies of occupationally exposed workers were judged inadequate for evaluation The second monograph evaluates TCEP a flame retardant with declining uses in the production of liquid polyester resins and in textile back coating formulations Traces have been detected in river water seawater drinking water sediment fish and shellfish and a few food items Experimental studies show low to moderate acute oral toxicity In repeat dose experiments TCEP caused adverse effects on the brain liver and kidneys The report concludes that TCEP is not an irritant to the eye or skin and is not teratogenic although some adverse effects on the fertility of male rats and mice have been demonstrated *Flame Retardants*, 1998
