Patrick Augustijns, Marcus Brewster, 2007-08-06 Solvent systems are integral to drug development and pharmaceutical technology This single topic encompasses numerous allied subjects running the gamut from recrystallization solvents to biorelevant media The goal of this contribution to the AAPS Biotechnology Pharmaceutical Aspects series is to generate both a practical handbook as well as a reference allowing the reader to make effective decisions concerning the use of solvents and solvent systems To this end the monograph was created by inviting recognized experts from a number of fields to author relevant sections Specifically 15 chapters have been designed covering the theoretical background of solubility the effect of ionic equilibria and pH on solubilization the use of solvents to effect drug substance crystallization and polymorph selection

the use of solvent systems in high throughput screening and early discovery solvent use in preformulation the use of solvents in bio relevant dissolution and permeation experiments solvents and their use as toxicology vehicles solubilizing media and excipients in oral and parenteral formulation development specialized vehicles for protein formulation and solvent systems for topical and pulmonary drug administration The chapters are organized such that useful decision trees are included together with the scientific underpinning for their application In addition trends in the use of solvent systems and a balance of current views make this monograph useful to both the novice and experienced researcher and to scientists at all developmental stages from early discovery to late pharmaceutical operations [Handbook of Pharmaceutical Additives](#)

Michael Ash,Irene Ash,2007-01-01 *Integrated Safety and Risk Assessment for Medical Devices and Combination Products*

Shayne C. Gad,2020-02-24 While the safety assessment biocompatibility of medical devices has been focused on issues of local tissue tolerance irritation sensitization cytotoxicity and selected quantal effects genotoxicity and acute lethality since first being regulated in the late 1950s this has changed as devices assumed a much more important role in healthcare and became more complex in both composition and in their design and operation Add to this that devices now frequently serve as delivery systems for drugs and that drugs may be combined with devices to improve device performance and the problems of ensuring patient safety with devices has become significantly more complex A part of this requirements for ensuring safety once based on use of previously acceptable materials largely polymers and metals have come to requiring determining which chemical entities are potentially released from a device into patients and how much is released Then an appropriate and relevant yet also conservative risk assessment must be performed for each identified chemical structure The challenges inherent in meeting the current requirements are multifold and this text seeks to identify understand and solve all of them Identify and verify the most appropriate available data As in most cases such data is for a different route of exposure transform it for use in assessing exposure by the route of interest As the duration and rate of exposure to moieties released from a device are most frequently different longer than what available data speaks to transformation across tissue is required As innate and adaptive immune responses are a central part of device patient interaction assessing potential risks on this basis are required Incorporating assessments for special populations such as neonates Use of Q SAR Quantitative Structure Activity Relationships modeling in assessments Performance and presentation of integrative assessments covering all potential biologic risks Appendices will contain summarized available biocompatibility data for commonly used device materials polymers and metals and safety assessments on the frequently seen moieties in extractions from devices

Raman microscopy and LC MS and presents manufacturing techniques such as granulation compaction and compression Complete with case studies and a discussion of regulatory requirements this is a core reference for pharmaceutical scientists regulators and graduate students

**Early Drug Development** Mitchell N. Cayen,2011-02-25 The focus of early drug development has been the submission of an Investigational New Drug application to regulatory agencies Early Drug Development Strategies and Routes to First in Human Trials guides drug development organizations in preparing and submitting an Investigational New Drug IND application By explaining the nuts and bolts of preclinical development activities and their interplay in effectively identifying successful clinical candidates the book helps pharmaceutical scientists determine what types of discovery and preclinical research studies are needed in order to support a submission to regulatory agencies
