are in the earliest fossil record of multicellular life over 500 million years ago There are over 100 000 kinds of recorded mollusks and some estimate that there are over a million more that have yet to be discovered Some breathe air others live in fresh water but most live in the ocean They range in size from a grain of sand to a beach ball and in weight from a few grams to several hundred pounds And in this lavishly illustrated volume they finally get their full due The Book of Shells offers a visually stunning and scientifically engaging guide to six hundred of the most intriguing mollusk shells each chosen to convey the range of shapes and sizes that occur across a range of species Each shell is reproduced here at its actual size in full color and is accompanied by an explanation of the shell's range distribution abundance habitat and operculum the piece that protects the mollusk when it's in the shell Brief scientific and historical accounts of each shell and related species include fun filled facts and anecdotes that broaden its portrait The Matchless Cone for instance or *Conus cedonulli* was one of the rarest shells collected during the eighteenth century So much so in fact that a specimen in 1796 was sold for more than six times as much as a painting by Vermeer at the same auction But since the advent of scuba diving this shell has become far more accessible to collectors though not without certain risks Some species of *Conus* produce venom that has caused more than thirty known human deaths The Zebra Nerite the Heart Cockle the Indian Babylon the Junonia the Atlantic Thorny Oyster shells from habitats spanning the poles and the tropics from the highest mountains to the ocean's deepest recesses are all on display in this definitive work
