Hodgman,1920 [Modelling of Materials Processing](#) Gregory C. Stangle,2013-11-27 This is a book about mathematical modelling It focuses on the modelling of the preparation of materials Materials are important of course in an economic sense the goods of goods and services are made of materials This provides a strong incentive to produce good materials and to improve existing materials Mathematical modelling can help in this regard Without a doubt modelling a materials processing operation is not strictly necessary Materials synthesis and fabrication processes certainly existed before the invention of mathematics and computers and well before the combined use of mathematics and computers Modelling can

however be of assistance if done properly and if used properly The mathematical modelling described in this book is at its root a rather formal structured way of thinking about materials synthesis and fabrication processes It requires looking at a process as a whole It requires considering everything that is or might be important It requires translating the details of a given physical process into one or more mathematical equations It requires knowing how to simplify the equations without over simplifying them
