The Immunopathology of Lymphoreticular Neoplasms J.

Twomey, 2012-12-06 Until recently understanding of the lymphomas was limited and largely descriptive Attention has been focused for the most part upon morphological issues and clinical matters Although useful this approach has many shortcomings The true cytoidentity of primary neoplastic cells was not established by these methods nor could their clonal nature be recognized The more overt changes in immunological function such as monoclonal gammopathies and immunodeficiencies were appreciated as important components of these diseases However subtle immunological perturbations were not recognized Furthermore associations were not established between the lymphoreticular neoplasms on the one hand and both primary and secondary immunological abnormalities on the other There has been considerable recent progress in the fields of immunobiology cytology and immunochemistry These new approaches have proved readily applicable to studies on the lymphomas The term lymphoma has been applied to a heterogeneous group of neoplasms that involve lymphoid tissues This term is not altogether satisfactory since it implies that cells of primarily the lymphoid series are involved in the neoplastic process Some neoplasms heretofore classified as lymphomas now appear from the results of

penetrating analysis using newer methodology to be malignancies of the macrophage series rather than of the lymphocytic series. These neoplasms include Hodgkin's disease and a minority of neoplasms previously referred to as histiocytic lymphomas. The majority of these histiocytic lymphomas are now known to be lymphoid malignancies involving the B cell series.

Protides of the Biological Fluids H. Peeters, 2014-11-26 An International Review Series Devoted to Proteins and Related Studies Volume 32 Protides of the Biological Fluids documents the proceedings of the 32nd Colloquium held in 1984. This compilation is organized into three parts. Part I begins with an introduction to the defense mechanism of immunoglobulins followed by a description of enzymes and proteins such as lactoperoxidase and lactoferrin. The secretions that include CSF, colostrum, milk, female and male genital secretions, saliva, gastrointestinal juice, nasal and bronchoalveolar secretions, tears, and synovial fluid are also elaborated. The tumor markers which include ferritin, CEA, and TPA are dealt with in Part II. The immunotoxins, tumor imaging, and lymphoid malignancies are also covered. Part III is devoted to the advances in the separation of protides including the staining procedure for protein detection, two-dimensional electrophoresis, and HPLC and affinity chromatography. This book is valuable to biology students and clinicians of disciplines related to advances in the protein field.
