Office of Naval Research, 1987. *Advances in Botanical Research*, 1997-03-07. *Advances in Botanical Research* is a multi volume publication that brings together reviews by recognized experts on subjects of importance to those involved in botanical research. For more than thirty years *Advances in Botanical Research* has earned a reputation for excellence in the field. For those working on plant pathology *Advances in Plant Pathology* has also carved a niche in the plant sciences during its decade of publication. Academic Press has merged *Advances in Plant Pathology* into *Advances in Botanical Research*. The plant science community will find that the merger of these two serials will provide one comprehensive resource for the field. To ensure complete coverage John Andrews and Inez Tommerup the editors of *Advances in Plant Pathology* have joined the editorial board of the new series which will include equal coverage of plant pathology and botany in both thematic and mixed volumes. The first few volumes of the new series will be slanted toward botany or plant pathology however future eclectic volumes will be fully integrated. The resulting synergy of these two serials greatly benefits the plant science community by providing a more comprehensive resource under one roof. The joint aim is to continue to include the very best articles thereby maintaining the status of a high impact factor review series. *Handbook of Advanced Industrial and Hazardous Wastes Management* Lawrence K. With all the current efforts to use non fossil sources as a starting point for future energy solutions, consideration is also being given to using microbial activities as a direct or indirect source of energy production. This ranges from the use of algae as biomass or as H₂ producers, anaerobic microorganisms to produce methane, hydrogen and even electricity directly. This book deals with both theoretical and technical possibilities of using anaerobic microorganisms in combination with wastewater as a substrate source to produce biofuels and bioenergy in the form of biomass, CH₄ and H₂ as well as the corresponding power densities and electricity quantities in economically justifiable processes. Unique process facilities are widely addressed however special interest is also placed in biorefinery and circular economy related concepts. The theoretical background as well as application
