Boye,2015-02-04 For several years the food industry has been interested inidentifying components in foods which have health benefits to beused in the development of functional food and nutraceuticalproducts Examples of these ingredients include fibre phytosterols peptides proteins isoflavones saponins phyticacid probiotics prebiotics and functional enzymes Although muchprogress has been made in the identification extraction andcharacterisation of these ingredients there remains a need forready and near market platform technologies for processing theseingredients into marketable value added functional food andnutraceutical products This book looks at how

these ingredients can be effectively incorporated into food systems for market and provides practical guidelines on how challenges in specific food sectors such as health claims and marketing can be addressed during processing. *Nutraceutical and Functional Food Processing Technology* is a comprehensive overview of current and emerging trends in the formulation and manufacture of nutraceutical and functional food products. It highlights the distinctions between foods falling into the nutraceutical and functional food categories. Topics include sustainable and environmentally friendly approaches to the production of health foods, guidelines and regulations and methods for assessing safety and quality of nutraceutical and functional food products. Specific applications of nutraceuticals in emulsion and salad dressing, food products, beverages and soft drinks, baked goods, cereals and extruded products, fermented food products are covered, as are novel food proteins and peptides and methods for encapsulated nutraceutical ingredients and packaging.
