2. Abstract/Concept:

Packaging is a scientific method of containing the [food] products against physical damage, chemical changes, further microbial contamination and display the product in a most attractive manner as per consumer preferences. Packaging provides a means to preserve, transport, store, distribute and merchandise of a product. Product packaging plays a vital role to reach the product to its consumer safely without compromising its quality. Packaging has a significant role in sustainability nowadays as it reduces food loss, keeps food quality better for a long period and reduces wasteful consumption and use of products. In developed and developing countries, concern about packaging design and wastes that are generating from it has arisen as poor packaging design and disposal of packaging wastes are creating frequent environmental problems. In the year 2012, 80 million tons of wastes were generated in Europe coming from packaging which is composed of 38 % paper, 21 % plastic, 20 % glass, 15 % wood, and 6 % metals. Packaging wastes are becoming a significant portion in the municipal solid wastes, too. So, packaging design, production, transportation, use and final disposal of packaging wastes need proper environmental consideration. A proper management system at the end of life of packaging can play an important role in reducing environmental burden. Life cycle assessment (LCA) is an environmental management tool that is used to identify the environmental impact of a product, process or service from "cradle to grave". It can be used in analyzing the overall environmental burden measuring the greenhouse gas emission, total energy consumption, raw material used, hazardous substances like CO₂, SO_x, NO_x emissions throughout a product's life cycle.

3. Sustainable Background (The UN SDGs):

Our world and all the people living on it is being destroyed by plastic. Not only is plastic pollution choking the environment and destroying biodiversity but the very production itself is harming people's health, accelerating social injustice, and fueling the climate emergency. It's time to break our toxic relationship with plastic. Join the movement of Global Citizens, governments, activists, and organizations around the world demanding action by endorsing the call for a Global Plastics Treaty.

Flexible Packaging's can be used sustainably. Most importantly, 4 Goals (Out of United Nations announced 17 Sustainable Development Goals) are directly playing a crucial role as per below:

Goal serial	Goal Name	Goal description	Flexipack pertinent
Goal 9	Industry, Innovation and Infrastructure	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	Sustainable industrialization
Goal 12	Responsible Consumption and Production	Ensure sustainable consumption and production pattern.	Sustainable production
